# **Towards the measurement of electromobility in international trade**

Ira Ronzheimer  
José Durán Lima  
Cristóbal Budnevich  
Matthew Gomies

This document was prepared by Ira Nadine Ronzheimer, José Durán Lima and Matthew Gomies, staff of the Regional Integration Unit of the International Trade and Integration Division of the Economic Commission for Latin America and the Caribbean (ECLAC), and Cristóbal Budnevich, consultant with the same division, as part of the activities of the ECLAC project "Inclusive and sustainable smart cities in the framework of the 2030 Agenda for Sustainable Development in Latin America and the Caribbean", implemented by ECLAC with the support of Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ). The authors wish to thank Niklas Lindig, Sebastian Herreros, and Daniel Cracau for their support in conducting the preliminary research and review of the manual. This document was presented at the virtual workshop "Measuring electromobility in international trade", organized by Sergio Arboleda University in Bogotá. Civil engineers, engine engineers, and specialists in the automotive sector participated in the workshop.

The views expressed in this document, which has been reproduced without formal editing, are those of the authors and do not necessarily reflect the views of the Organization or the countries it represents.

## Contents

<b>Summary</b>	7
<b>Introduction</b>	9
<b>I. Electromobility in Latin America: an overview</b>	11
<b>II. Methodology</b>	15
A. Underlying assumptions	20
<b>III. Breakdown structures</b>	23
A. Common breakdown structures	23
1. Bus body	23
2. Bus cabins	26
3. Electronics	29
4. Generally necessary parts	31
B. Electric bus: eCitaro	32
1. Electric engine	33
2. Drivetrain	34
3. Battery	39
C. Conventional bus: Citaro with an internal combustion engine	47
1. Conventional diesel engine	47
2. Conventional drivetrain	50
3. Diesel fuel system	52
<b>IV. Aggregated Results</b>	55
A. Key raw materials	61
B. Main differences between electric and conventional buses	64
<b>V. Retrofitting and recycling opportunities</b>	67

<b>VI.</b>	<b>Opportunities and limitations of the proposed methodology .....</b>	<b>71</b>
<b>VII.</b>	<b>Cost structure of an electric versus a conventional diesel bus .....</b>	<b>73</b>
<b>VIII.</b>	<b>Factor weight for estimating trade in inputs .....</b>	<b>77</b>
	<b>Bibliography .....</b>	<b>83</b>
	<b>Annexes .....</b>	<b>89</b>
Annex 1	Disaggregation into raw materials of main inputs .....	91
Annex 2	Electric bus input vectors.....	94
Annex 3	Conventional bus input vector .....	104

## Tables

Table 1	LAC (11 countries): fleet of urban transport buses as of April 2022.....	11
Table 2	Comparison of different types of buses .....	13
Table 3	Tariff codes for buses in the HS 2012 and 2017 .....	16
Table 4	Examples of inputs for vehicles in HS chapter 87.....	18
Table 5	Summary of assumptions made .....	21
Table 6	Common breakdown structures of a conventional and an electric bus .....	23
Table 7	Disaggregation of the bus body cluster.....	25
Table 8	Disaggregation of the cabin cluster .....	27
Table 9	Disaggregation of the electronics cluster.....	29
Table 10	Generally necessary parts.....	31
Table 12	Disaggregation of the motor cluster .....	33
Table 13	Disaggregation of the drivetrain cluster.....	37
Table 14	Battery performance indicators .....	40
Table 15	Weight distribution of battery inputs and parts .....	41
Table 16	Primary inputs required to produce the eCitaro's battery cells (ten modules) .....	41
Table 17	Battery inputs by battery part.....	42
Table 18	Disaggregation of the battery cluster .....	45
Table 19	Disaggregation of the conventional motor cluster.....	48
Table 20	Disaggregation of the conventional drivetrain cluster .....	50
Table 21	Disaggregation of the fuel tank cluster .....	52
Table 22	Weights and disaggregation by cluster and vector-level for the electric bus .....	55
Table 23	Weights and disaggregation by cluster and vector-level for the electric bus .....	58
Table 24	Top four raw materials required to produce conventional and electric buses .....	61
Table 25	Differences in raw material requirements for electric and conventional buses .....	64
Table 26	Top differences in raw material requirements by electric and conventional buses .....	65
Table 27	SWOT analysis of retrofitting .....	67
Table 28	Elaborated input changes for retrofitting .....	68
Table 29	Inputs to produce a pantograph.....	69
Table 30	Products with an intra-industry conversion factor of 1.88 .....	78
Table 31	Number of vehicles produced by type, 2019 or latest year available .....	79
Table 32	Industry applications of copper, iron and steel and semiconductors .....	81
Table A1.1	Density of some fillers in rubbers.....	91
Table A1.2	Disaggregation of other relevant inputs .....	93
Table A2.1	Elaborated parts vector (electric bus) .....	94
Table A2.2	Semi-elaborated parts vector (electric bus) .....	95
Table A2.3	Raw materials vector (electric bus) .....	98
Table A3.1	Elaborated parts vector (convencional bus) .....	104

Table A3.2	Semi-elaborated parts vector (convencional bus) .....	107
Table A3.3	Raw materials vector (convencional bus) .....	109

## Figures

Figure 1	LAC: share of greenhouse emissions, by sector, 2018 .....	12
Figure 2	LAC: fuels used by the transport sector by product, 2018 .....	12
Figure 3	Economic sectors associated with the parts required for body bodies by level of product elaboration .....	25
Figure 4	The subclusters of the bus cabin cluster .....	27
Figure 5	Economic sectors associated with the parts required for bus cabins by level of product elaboration .....	28
Figure 6	Subclusters of the electronics cluster .....	29
Figure 7	Economic sectors associated with the parts required for bus electronics by level of product elaboration .....	30
Figure 8	Economic sectors associated with the parts required for electric motors by level of product elaboration .....	34
Figure 9	The subclusters of the drivetrain cluster .....	37
Figure 10	Economic sectors associated with the parts required for electric drivetrains by level of product elaboration .....	38
Figure 11	The subclusters of the battery cluster .....	46
Figure 12	Economic sectors associated with the parts required for bus battery by level of product elaboration .....	46
Figure 13	Subclusters of the conventional motor cluster .....	48
Figure 14	Economic sectors associated with the parts required for the diesel engine by level of product elaboration .....	49
Figure 15	Subclusters of the conventional drivetrain cluster .....	50
