Preface x
Executive summary xi

CHAPTER 1
INTRODUCTION 1
1.1. Background 1
1.2. Definition of animal production activities, livestock production and productivity 2
1.3. Importance of livestock and livestock data 3
1.4. Livestock-rearing systems 3
1.5. Contents of the Guidelines 5

CHAPTER 2
RELEVANCE AND USE OF LIVESTOCK STATISTICS 7
2.1. Livestock in development 7
2.2. Stakeholders in livestock data systems 8
2.3. Livestock data in the SDG context 8
2.4. Livestock data in the Global Strategy context 9
2.5. Scope of livestock statistics 10
2.6. Relevance for management, policy, planning and benchmarking 11

CHAPTER 3
MAIN DATA SOURCES AND DATA COLLECTION METHODS 13
3.1. Population, agricultural and livestock censuses 14
3.2. Periodic and ad hoc sample surveys 15
3.2.1. Identification and definition of systems 16
3.2.2. Periodic surveys of agricultural holdings 16
3.2.3. Periodic surveys on livestock input and output industry 17
3.2.4. Household income-expenditure surveys 17
3.2.5. Focus group data collection 18
3.3. Community-level data collection 20
3.4. Administrative data 20
3.4.1. Administrative reporting system 20
3.4.2. Administrative registers 21
3.4.3. Compatibility of data 22
3.5. Technical conversion factors 22
3.6. Integrated systems 24
3.7. Data collection methods 24
3.7.1. Interviews 24
3.7.2. Reporting 25
3.7.3. Direct observation and measurement 25

CHAPTER 4
INDICATORS AND ITEMS 27
4.1. Indicators 27
4.2. Items 38
4.3. Calculation of indicators 47
4.3.1. Livestock stocks 48
4.3.2. Meat production 53
4.3.3. Milk production 57
4.3.4. Egg production 59
4.3.5. Feed production, availability and use 61
4.3.6. Animal health 63
4.3.7. Watering of animals 63
4.4. Construction and application of a Gold Standard 64
4.4.1. The concept of the Gold Standard 64
4.4.2. Application of the Gold Standard 65
4.4.3. Issues arising in the practical implementation of a Gold Standard 65
4.4.4. Justification of a Gold Standard study 66
4.5. Combining and comparing data: surveys and Gold Standard collection 66

CHAPTER 5
OBTAINING DATA 71
5.1. Operational issues arising in the implementation of livestock surveys 71
5.1.1. Statistical units and coverage of livestock surveys 71
5.1.2. Reference day and period, timing of survey and frequency 72
5.1.3. Quality of reporting of the herd size 73
5.1.4. Point of survey 74
5.2. Data collection specifics, according to local and entity specificities 75
5.2.1. Holdings in the non-household sector (commercial holdings) 75
5.2.2. Holdings in the household sector (small holdings) 76
5.3. Sampling issues 78
5.3.1. Definition of target population 78
5.3.2. Designing the sample 79
5.3.3. Determining the survey weights and estimation 87
5.4. Some issues related to survey planning 92
5.4.1. Defining the data collection objectives and method 92
5.4.2. Designing the questionnaire 92

CHAPTER 6
PRESENTATION OF RESULTS FOR ANALYSIS: MAIN TABLES FOR DISSEMINATION 95
6.1. Data control and editing 95
6.2. Tabulation 99

CHAPTER 7
RESOURCES 103
7.1. Costs of livestock data collection 103
7.1.1. Physical and organizational aspects of costs 103
7.1.2. Calculation of financial costs 104
7.1.3. Cost aspects of the Gold Standard 106
7.1.4. Management steps to reduce data collection costs 110
7.2. Evaluating changes in data collection methods 110
7.2.1. Benefits of change 110
7.2.2. Comparison methods 110
7.3. Skills required for data collection 111
7.3.1. Skill sets required of data collection staff 111
7.3.2. Involvement of farmers in data collection 111
7.3.3. Training of data collection staff 112

CHAPTER 8
INTEGRATED SURVEY PROGRAMME 113
8.1. Needs for an integrated survey system 113
8.2. Overview of AGRIS 114
8.2.1. The AGRIS Cycle 115
8.2.2. Coverage of SDG indicators 116
8.3. Institutional setting 117
8.4. Steps identified and the contributions of the Guidelines 118

GLOSSARY OF KEY CONCEPTS 119

ANNEXES
Annex 1 121
Annex 2 141

Tables, figures and boxes

TABLES

Table 3.1. Group versus individual approaches to data collection. 19
Table 4.1. Livestock stocks. 28
Table 4.2. Meat production. 30
Table 4.3. Milk production. 32
Table 4.4. Egg production. 33
Table 4.5. Feed availability and utilization. 34
Table 4.6. Animal health. 37
Table 4.7. List of most common items necessary for estimating livestock production and productivity indicators. 39
Table 6.1. Total number of livestock by type and herd size classes. 99
Table 6.2. Total number and live weight of livestock by type and category of livestock. 99
Table 6.3. Main entries and exits of livestock by type. 100
Table 6.4. Total number and carcass weight of slaughtered livestock by livestock type and category. 100
Table 6.5. Destination of the meat produced on the farm. 100
Table 6.6. Total quantity of milk produced per type: cow, sheep and goat. 101
Table 6.7. Total quantity of milk produced per type: cow, sheep and goat; and milk utilization. 101
Table 6.8. Total number eggs produced, per breed. 101
Table 6.9. Total number of eggs produced, per breed; egg utilization. 101
Table 6.10. Use of feed per livestock type, type and source of feed. 102
Table 6.11. Use of veterinary services (number of holdings). 102
Table 6.12. Use of veterinary services (number of animals). 102
Table 7.1. Basic assumptions for cost calculations. 104
Table 7.2. Data collection costs per survey day: pilot country estimates and average. 105
Table 7.3. Physical parameters and assumptions applicable to Gold Standard data collection. 107
Table 7.4. Financial items for cost calculation in Gold Standard data collection. 108
Table 7.5. Total cost estimates for Gold Standard data collection. 109
Table 7.6. Data collection skill sets. 111
Table 8.1. Recommended AGRIS module flow. 115
Table 8.2. Steps toward establishment of an integrated system, and associated elements of these guidelines. 115

BOXES

Box 1.1.	Type of livestock system (WCA 2020, para. 8.5.3).	4
Box 2.1	Excerpt from Pica-Ciamarra *et al.* (2014, p. 11).	8
Box 3.1	Farm structure surveys in the EU.	14
Box 3.2.	Example of periodic survey on livestock holdings: the livestock productivity survey.	17
Box 3.3.	Livestock technical conversion factors. Excerpt from Pica-Ciamarra *et al.* (2014; p. 63).	23
Box 4.1.	Examples of herd structures.	49
Box 4.2.	Examples of calculations of main herd dynamics rates.	51
Box 4.3.	Survey methods used to estimate the herd dynamics.	52
Box 4.4.	Examples of calculations of animal growth (meat production on hoof).	54
Box 4.5.	Estimation of milk production at farm level: examples.	58
Box 4.6.	Calculating egg production at farm level: examples.	60
Box 4.7.	Estimation of the forage used: example.	62
Box 4.8.	Milk production data collection experiment in the United Republic of Tanzania.	68
Box 4.9.	Egg production data collection experiment.	69
Box 4.10.	Animal live weight.	69
Box 5.1.	Findings from the GS project titled "Improving methods for estimating livestock production and productivity".	76
Box 5.2.	Findings from the testing of different data collection methods.	77
Box 6.1.	Suggestions for further reading on quantitative data cleaning.	98
