ILO Cataloguing in Publication Data

The designations employed in ILO publications, which are in conformity with United Nations practice, and the presentation of material therein do not imply the expression of any opinion whatsoever on the part of the International Labour Office concerning the legal status of any country, area or territory or of its authorities, or concerning the delimitation of its frontiers.

The responsibility for opinions expressed in signed articles, studies and other contributions rests solely with their authors, and publication does not constitute an endorsement by the International Labour Office of the opinions expressed in them.

Reference to names of firms and commercial products and processes does not imply their endorsement by the International Labour Office, and any failure to mention a particular firm, commercial product or process is not a sign of disapproval.

ILO publications and digital products can be obtained through major booksellers and digital distribution platforms, or ordered directly from ilo@turpin-distribution.com. For more information, visit our website: www.ilo.org/publns or contact ilopubs@ilo.org.

This publication was produced by the Document and Publications Production,
Printing and Distribution Branch (PRODOC) of the ILO.

*Graphic and typographic design, layout and composition, copy editing,
proofreading, printing, electronic publishing and distribution.*

PRODOC endeavours to use paper sourced from forests managed
in an environmentally sustainable and socially responsible manner.

The *World Employment and Social Outlook: Trends 2018* was prepared by the Labour Market Trends and Policy Evaluation Unit of the ILO Research Department, headed a.i. by Veronica Escudero. The report was produced by Stefan Kühn, Santo Milasi and Sheena Yoon. Elva Lopez Mourelo and Christian Viegelahn provided important contributions. Judy Rafferty provided valuable research assistance. The forecast data underlying this report are derived from the ILO Trends Econometric Models, managed by Stefan Kühn and Steven Kapsos. The report would not have been possible without the feedback and baseline labour market information provided by the team led by Steven Kapsos, notably David Bescond, Roger Gomis, Rosina Gammarano, Yves Perardel and Marie-Claire Sodergren of the ILO Department of Statistics. Excellent comments and suggestions were also provided by L. Jeff Johnson, Deputy Director of the Research Department and Sangheon Lee, Director a.i. of the Research Department.

The ILO Research Department wishes to acknowledge the comments and suggestions provided by Deborah Greenfield, Deputy Director-General for Policy and James Howard, Senior Adviser to the Director-General. The team would like to acknowledge the input and suggestions of ILO colleagues including Adam Elsheiki, Akira Isawa, Antonia Asenjo, Catherine Saget, Christian Viegelahn, Claudia Ruiz, Elizabeth Manrique Echeverria, Eric Gravel, Fernanda Dutra, Frank Hagemann, Guillaume Delautre, Helmut Schwarzer, Ira Postolachi, Jeronim Capaldo, Juan Chacaltana, Ken Chamuva Shawa, Maria José Chamorro, Mariangels Fortuny, Pelin Sekerler Richiardi, Richard Horne, Roger Gomis, Sara Elder, Steven Kapsos, Takaaki Kizu and Yves Perardel. Excellent comments were also received from Dawn Holland (United Nations Department of Economic and Social Affairs) and Damian Grimshaw (University of Manchester). The authors are also grateful for the suggestions from the ILO Regional Offices for Africa, the Arab States, Asia and the Pacific, Europe and Central Asia, and Latin America and the Caribbean.

Executive summary

Global economic growth has rebounded and is expected to remain stable but low

Global economic growth increased to 3.6 per cent in 2017, after hitting a six-year low of 3.2 per cent in 2016. The recovery was broad based, driven by expansions in developing, emerging and developed countries alike. Future growth is likely to stay below 4 per cent, as economic activity normalizes in most major economies without significant stimulus and fixed investment remains at a moderate level.

Global unemployment remains elevated at more than 190 million

The latest developments in global unemployment are also mixed. According to the ILO's new estimation, based on improved data sets and methodologies, the global unemployment rate is expected to fall slightly to 5.5 per cent in 2018 (from 5.6 per cent in 2017), marking a turnaround after three years of rising unemployment rates. However, with a growing number of people entering the labour market to seek employment, the total number of unemployed is expected to remain stable in 2018, above 192 million. In 2019, the global unemployment rate is expected to remain essentially unchanged, whereas the number of unemployed is projected to grow by 1.3 million.

Vulnerable employment is on the rise

With these improvements in employment projected to be modest, the number of workers in vulnerable forms of employment (own-account workers and contributing family workers) is likely to increase in the years to come. Globally, the significant progress achieved in the past in reducing vulnerable employment has essentially stalled since 2012. In 2017, around 42 per cent of workers (or 1.4 billion) worldwide are estimated to be in vulnerable forms of employment, while this share is expected to remain particularly high in developing and emerging countries, at above 76 per cent and 46 per cent, respectively. Worryingly, the current projection suggests that the trend is set to reverse, with the number of people in vulnerable employment projected to increase by 17 million per year in 2018 and 2019.

The pace of working poverty reduction is slowing

Similarly, the global labour market has seen only weak progress in the area of working poverty. In 2017, extreme working poverty remained widespread, with more than 300 million workers in emerging and developing countries having a per capita household income or consumption of less than US\$1.90 (PPP) per day. Overall, progress in reducing working poverty is too slow to keep pace with the growing labour force in developing countries, where the number of people in extreme working poverty is expected to exceed 114 million in 2018, or 40 per cent of all employed people.

Emerging countries, on the other hand, achieved significant progress in reducing extreme working poverty, which is expected to affect less than 8 per cent (around 190 million) of workers there in 2017. The incidence of extreme poverty should continue to fall, translating into a reduction in the number of extreme working poor by 10 million per year in 2018 and 2019. Nevertheless, moderate working poverty, in which workers live on an income of between US\$1.90 and US\$3.10 per day in PPP, remains widespread, affecting 430 million workers in emerging and developing countries in 2017.

Significant variations in employment outcomes continue to exist between regions and countries

The world continues to experience diverse trends in employment outcomes. Developed countries are expected to enter their sixth consecutive year of decreasing unemployment rates, falling to 5.5 per cent in 2018, the lowest rate since 2007. Yet many countries continue to report high rates of labour underutilization, with large shares of discouraged workers and growing incidence of involuntary part-time employment.

By contrast, emerging countries have experienced a significant increase in unemployment rates between 2014 and 2017, driven by major economic downturns, in part due to the commodity price slump in many large economies, such as Brazil and the Russian Federation. The year 2018 marks a turning point, as the unemployment rate is expected to fall to 5.5 per cent (from 5.6 per cent in 2017), which would translate into an increase in the number of unemployed in emerging countries of around 0.4 million in 2018 and 1.2 million in 2019.

Unemployment in developing countries is expected to increase by half a million per year in both 2018 and 2019, with the unemployment rate remaining at around 5.3 per cent. For many developing and emerging countries, however, persistent poor-quality employment and working poverty pose the main challenges.

Inequalities in labour market outcomes persist

Underlying these aggregate labour market and social trends are disparities across a number of demographic groups. Gender disparities are of particular concern. On average, women are less likely to participate in the labour market, facing a global gender gap in participation of over 26 percentage points, and are less likely to find a job when they do participate. These gaps are particularly wide in Northern Africa and the Arab States, where women are twice as likely to be unemployed as men. Once in employment, women face segregation in terms of the sector, occupation and type of employment relationship, resulting in restricted access to quality employment. For instance, 82 per cent of women in developing countries are in vulnerable forms of employment in 2017, compared to 72 per cent of men.

The lack of employment opportunities for youth (i.e. those under 25 years of age) presents another major global challenge. Young people are much less likely to be employed than adults, with the global youth unemployment rate standing at 13 per cent, or three times higher than the adult rate of 4.3 per cent. The challenge is particularly acute in Northern Africa, where almost 30 per cent of young people in the labour market are without a job. Importantly, gender inequalities are already established among young workers, rendering future progress in reducing gender gaps even more difficult.

Looking ahead, the projected structural shifts to the service sector could create complex pressures on job quality
