# **VISUAL DISPLAY UNITS: RADIATION PROTECTION GUIDANCE**

Prepared by the International Non-ionizing  
Radiation Committee of the International Radiation  
Protection Association in collaboration with the  
International Labour Organization

INTERNATIONAL LABOUR OFFICE, GENEVA

---

The International Programme for the Improvement of Working Conditions and Environment (PIACT) was launched by the International Labour Organisation in 1976 at the request of the International Labour Conference and after extensive consultations with member States. PIACT is designed to promote or support action by member States to set and attain definite objectives aiming at "making work more human". The Programme is thus concerned with improving the quality of working life in all its aspects: for example, the prevention of occupational accidents and diseases, a wider application of the principles of ergonomics, the arrangement of working time, the improvement of the content and organisation of work and of conditions of work in general, a greater concern for the human element in the transfer of technology. To achieve these aims, PIACT makes use of and co-ordinates the traditional means of ILO action, including:

- the preparation and revision of international labour standards;
- operational activities, including the dispatch of multidisciplinary teams to assist member States on request;
- tripartite meetings between representatives of governments, employers and workers, including industrial committees to study the problems facing major industries, regional meetings and meetings of experts;
- action-oriented studies and research; and
- clearing-house activities, especially through the International Occupational Safety and Health Information Centre (CIS) and the Clearing-house for the Dissemination of Information on Conditions of Work.

This publication is the outcome of a PIACT project.

*ILO Cataloguing in Publication Data*

The designations employed in ILO publications, which are in conformity with United Nations practice, and the presentation of material therein do not imply the expression of any opinion whatsoever on the part of the International Labour Office concerning the legal status of any country, area or territory or of its authorities, or concerning the delimitation of its frontiers.

The responsibility for opinions expressed in signed articles, studies and other contributions rests solely with their authors, and publication does not constitute an endorsement by the International Labour Office of the opinions expressed in them.

Reference to names of firms and commercial products and processes does not imply their endorsement by the International Labour Office, and any failure to mention a particular firm, commercial product or process is not a sign of disapproval.

ILO publications can be obtained through major booksellers or ILO local offices in many countries, or direct from ILO Publications, International Labour Office, CH-1211 Geneva 22, Switzerland. A catalogue or list of new publications will be sent free of charge from the above address.

## Preface

This publication is one of a series of practical guides on occupational hazards arising from non-ionizing radiation (NIR), carried out in collaboration with the International Non-Ionizing Radiation Committee (INIRC)<sup>1</sup> of the International Radiation Protection Association (IRPA) as part of the ILO International Programme for the Improvement of Working Conditions and Environment (PIACT).

The purpose of this book is to provide information, basic reference materials and guidance regarding the safety of visual display units (VDUs) with respect to radiation emissions. It is intended for the use of competent authorities, employers and workers, and in general of all persons in charge of occupational safety and health. The following topics are covered: characteristics, measurement and levels of radiation emissions from VDUs; assessment of exposure and laboratory studies; health effects and human studies; prevention and control measures; and quality control and maintenance.

The manuscript was prepared by an IRPA/INIRC working group, chaired by Professor B. Knave, which included Dr. M. Repacholi, Dr. J. Stolwijk and Dr. M. Stuchly from the INIRC, and Dr. U. Bergqvist from the National Institute of Occupational Health of Sweden. Following comments received from INIRC members, it was reviewed in detail during the annual meeting of the IRPA/INIRC in Rome, May 1991, in cooperation with Dr. G.H. Coppée representing the International Labour Office.

This book is the result of a joint ILO/IRPA-INIRC activity and is published by the ILO on behalf of the two organizations. The ILO wishes to thank the International Non-Ionizing Radiation Committee of the IRPA, and in particular Professor B. Knave and his working group for their contribution and cooperation in the preparation of this practical guide on radiation protection aspects of VDUs in the workplace.

---

<sup>1</sup> Since May 1992 the INIRC of the IRPA has become an independent scientific body called the International Commission on Non-Ionizing Radiation Protection (ICNIRP) and has responsibility for NIR protection in the same way as the International Commission on Radiological Protection (ICRP) has for ionizing radiation. (ICNIRP Secretariat: c/o Dipl.-Ing. R. Matthes, Bundesamt für Strahlenschutz, Institut für Strahlenhygiene, Ingoldstädter Landstrasse 1, D-85764 Oberschleissheim, Germany.
