# Air Quality Guidelines

for Europe

Second Edition

## **CORRIGENDUM**

**On page 98, under Health risk evaluation, the second paragraph should read as follows.**

In Germany a TDI for PCB of 1–3  $\mu\text{g/kg BW}$  has been suggested. It was also recommended that, for precautionary reasons, the proportional daily intake via indoor air should not exceed 10% of the TDI for long periods. On this basis an action level for source removal of 3000  $\text{ng/m}^3$  has been derived. For concentrations between 3000  $\text{ng/m}^3$  and 10 000  $\text{ng/m}^3$  (that is, between 3  $\mu\text{g/m}^3$  and 10  $\mu\text{g/m}^3$ ) a concrete health risk is not assumed. However, mitigation measures should be undertaken as soon as possible to reduce the level to 300  $\text{ng/m}^3$ , below which concentrations are thought to be of no concern. Source removal should also be undertaken if levels are found to be between 300 and 3000  $\text{ng/m}^3$  (8).

The World Health Organization was established in 1948 as a specialized agency of the United Nations serving as the directing and coordinating authority for international health matters and public health. One of WHO's constitutional functions is to provide objective and reliable information and advice in the field of human health, a responsibility that it fulfils in part through its publications programmes. Through its publications, the Organization seeks to support national health strategies and address the most pressing public health concerns.

The WHO Regional Office for Europe is one of six regional offices throughout the world, each with its own programme geared to the particular health problems of the countries it serves. The European Region embraces some 870 million people living in an area stretching from Greenland in the north and the Mediterranean in the south to the Pacific shores of the Russian Federation. The European programme of WHO therefore concentrates both on the problems associated with industrial and post-industrial society and on those faced by the emerging democracies of central and eastern Europe and the former USSR.

To ensure the widest possible availability of authoritative information and guidance on health matters, WHO secures broad international distribution of its publications and encourages their translation and adaptation. By helping to promote and protect health and prevent and control disease, WHO's books contribute to achieving the Organization's principal objective – the attainment by all people of the highest possible level of health.

The designations employed and the presentation of the material in this publication do not imply the expression of any opinion whatsoever on the part of the Secretariat of the World Health Organization concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. The names of countries or areas used in this publication are those that obtained at the time the original language edition of the book was prepared.

The mention of specific companies or of certain manufacturers' products does not imply that they are endorsed or recommended by the World Health Organization in preference to others of a similar nature that are not mentioned. Errors and omissions excepted, the names of proprietary products are distinguished by initial capital letters.

The views expressed in this publication are those of the participants in the meetings and do not necessarily represent the decisions or the stated policy of the World Health Organization.

# Contents

<i>Foreword</i> .....	<i>vii</i>
Preface .....	ix

## PART I. GENERAL

1. Introduction .....	1
2. Criteria used in establishing guideline values .....	11
3. Summary of the guidelines .....	32
4. Use of the guidelines in protecting public health .....	41

## PART II. EVALUATION OF RISKS TO HUMAN HEALTH

5. Organic pollutants .....	57
5.1 Acrylonitrile .....	59
5.2 Benzene .....	62
5.3 Butadiene .....	67
5.4 Carbon disulfide .....	71
5.5 Carbon monoxide .....	75
5.6 1,2-Dichloroethane .....	80
5.7 Dichloromethane .....	83
