Global Biodiversity

Status of the Earth's Living Resources

A Report compiled by
the
World Conservation Monitoring Centre

Editor: Brian Groombridge

in collaboration with
The Natural History Museum, London
and in association with
IUCN - The World Conservation Union
UNEP - United Nations Environment Programme
WWF - World Wide Fund for Nature
and the
World Resources Institute

With project sponsorship from
Overseas Development Administration, UK
and additional support from
The Ministry of Foreign Affairs, The Netherlands
The Ministry of the Environment, Denmark
and
The World Bank

The designations of geographical entities in this book, and the presentation of the material, do not imply the expression of any opinion whatsoever on the part of WCMC or its sponsoring organisations concerning the legal status of any country, territory, or area, or of its authorities, or concerning the delimitation of its frontiers or boundaries. In recent years geopolitical entities have become more fluid and this is not reflected consistently in the tables which were completed at different times and use data of different ages.

A catalogue record for this book is available from the British Library

Contents

How to Use this Book	viii
World Conservation Monitoring Centre	ix
Acknowledgements	x
Preface	xii
Biodiversity - An Overview	xiii

Part 1. BIOLOGICAL DIVERSITY

SYSTEMATICS AND DIVERSITY

1. GENETIC DIVERSITY	I
The nature and origin of genetic variation	1
Measuring genetic variation	1
The interpretation of variation	3
The environment and the distribution of genetic variation	3
Conclusion	6
2. SYSTEMATICS AND DIVERSITY	7
Biological classification	7
Phylogenetic relationships and their estimation	7
From hierarchy to classification	7
Taxonomic nomenclature and its regulation	9
Major features of the hierarchy of life	10
Systematics and the measurement of biodiversity	11
3. SPECIES CONCEPTS	13
What is a species?	13
Early species concepts	13
Evolutionary theory and polytypic species	13
The biological species concept	14
The phylogenetic species concept	15
Species in practice	15
Conclusion	16
4. SPECIES INVENTORY	17
Current status	17
Prediction from the existing partial inventory	20
Other approaches to predicting patterns	23
Uncharted realms of species richness	26
Sampling the hyper-diverse but poorly known	31
New data on tropical insects and what they convey	32
Prospects for improved species richness estimates	36

SPECIES DIVERSITY

5. SPECIES DIVERSITY: AN INTRODUCTION	40
A brief history of diversity	40
Measuring biological diversity	41
The global distribution of species richness	43
Species and energy	45
Explanations and hypotheses	46

6.	MICROORGANISMS	47
	Taxonomic scope	47
	Assessment of diversity	47
	Species concepts in microorganisms	47
	Extent of genetic diversity	49
	Regions and habitats of maximum diversity	49
	Role of microorganisms in biodiversity maintenance	50
	Role of microorganisms in biosphere functions	51
	Potential contribution of microorganisms to sustainable development	51
	The need for diversity amongst microorganisms	52
	<i>Ex situ</i> conservation of microorganisms	52
	The taxonomic challenge	52
7.	LOWER PLANT DIVERSITY	55
	Bryophytes	55
	Lichens	55
	Algae	57
8.	HIGHER PLANT DIVERSITY	64
	The groups of higher plants	64
	The distribution of higher plants	65
9.	NEMATODES	88
	Nematode diversity	88
	The ecological importance of nematodes	90
10.	DEEP-SEA INVERTEBRATES	93
	Deep-sea communities	93
	Ocean trenches	95
	Hydrothermal vents	98
	Cold seeps	100
11.	SOIL MACROFAUNA	103
	Soil and soil fauna	103
	Patterns of species richness	105
	General patterns of diversity	113
12.	FISHES	116
	The diversity of fishes	116
	Freshwater fishes: species richness and endemism	116
	Subterranean fishes	121
	Coral reef fishes	122
13.	HIGHER VERTEBRATES	136
