## **Russian Federation Air Quality Policies**

This document is based on research that UNEP conducted in 2015, in response to Resolution 7 of the UNEA 1. It describes countrylevel policies that impact air quality. Triple question marks (???) indicate that information for the section couldn't be found.

Please review the information, and provide feedback. A Word version of the template can be provided upon request. Corrections and comments can be emailed to Vered. Ehsani@unep.org and George. Mwaniki@unep.org.

Russian Federation Air Quality Policy Matrix				
Goals	Status	Current Policies & Programmes		
GENERAL	Overall situation with respect to air quality in	National Ambient air quality standards:		
	<ul> <li>the country, including key air quality challenges:</li> <li>Air quality across Russia often exceeds the national set limits.</li> <li>In 2007, 69% of Russian cities were considered to experience poor air quality, this translated to more than 50% of the Russian population being exposed to air pollution<sup>1</sup>.</li> <li>In 80% of Russia's cities air pollution is linked to anthropogenic emissions and in 15% of the cities,</li> </ul>	<ul> <li>Russia has also established Air quality standards which determine allowable limits for hazardous substances both in the industrial and residential areas.</li> </ul>		
		National Air Quality Policy:		
		• In April 2012, the principles of state policy in the area of environmental development for the period up to 2030 were approved by the Russian president, defining for the first time a comprehensive environmental policy for the country.		
		Air Quality legislation / programmes:		
		<ul> <li>Russia has an extensive environmental legislative legacy and over the last twenty years has adopted several international practices.</li> </ul>		
	natural conditions amplify the anthropogenic impact.	• Recent laws which expand the earlier legislation and introduce emission limit values include the law on registration of legal entities and individual entrepreneurs with sources of		
	The level of air pollution in Russia's cities is largely determined by a combination of low	emissions of air pollutants of 2011.  Other: ???		
	efficiency and high power intensity industries and transport networks that cannot adequately			
	accommodate current traffic flows.			
	• WHO estimates that outdoor air pollution causes 33300 premature deaths annually <sup>2</sup>			

<sup>&</sup>lt;sup>1</sup> Simon Richmond, *Russia* (Lonely Planet, 2010). <sup>2</sup> WHO, 'WHO | Country Profiles of Environmental Burden of Disease', *WHO*, 2008 <a href="http://www.who.int/quantifying">http://www.who.int/quantifying</a> ehimpacts/national/countryprofile/en/#T>.

## Air quality monitoring system: ??? Industries that have the potential to impact air **Emission regulations for industries:** REDUCE **EMISSIONS** quality: **FROM** • The right to emit hazardous substances into the atmosphere requires a permit that sets out • Industrial emissions are the most important **INDUSTRIE** the maximum permissible emission levels of the applicable hazardous substances. source of air pollutants in Russia S • In certain cases (e.g., during the commissioning of a facility), a company may operate • Air pollution from industrial installations under a permit that temporarily allows it to emit in excess of the established maximum emanates from the following: power generation, permissible emission levels. complete range of mining and extractive • Air pollution permits are issued by federal or regional authorities, depending on whether industries producing coal, oil, gas, chemicals, and the relevant source of pollution is subject to regional or federal environmental control. metals; all forms of machine building from rolling mills to high-performance aircraft and space vehicles: defence industries (including Small installation's emissions regulated: (Yes/No) Yes radar, missile production, advanced electronic components), shipbuilding; road and rail **Renewable energy investment promoted:** transportation equipment; communications • To enable the financial viability of renewable energy installations, Russian authorities equipment; agricultural machinery, construction have created a support scheme, that issues 'certificates' and 'premiums' to provide equipment; electric power generating and additional revenues to the operators of renewable energy installations. transmitting equipment; medical and scientific • Moreover, the authorities have established a scheme for the compensation of the network instruments; consumer durables, textiles, connection costs of renewable energy installations with an installed capacity not foodstuffs, handicrafts among others exceeding 25MW. (http://www.reegle.info/policy-and-regulatory-overviews/RU) **Energy efficiency incentives:** (ex: Subsidies, labelling, rebates etc) **GDP of country**: USD 2.113Trillion in 2013 • The Energy Strategy up to 2020 outlined several main priorities: an increase in energy **Industries' share of GDP: 37.5%** efficiency, reducing impact on the environment, sustainable development, energy • Electricity sources: development, and technological development, as well as improved effectiveness and competitiveness. • 67.7% of the installed electricity generating capacity (223.1million KW in 2010) is generated Incentives for clean production and installation of pollution prevention technologies: from fossil fuel, 17.8% from nuclear and the rest ??? 15.1% is generated from hydroelectric plants Actions to ensure compliance with regulations: (monitoring, enforcement, fines etc) • In Russia any activity that may have an adverse impact on the environment is subject to • issuance of a special permit or license,

• establishment of limits with respect to the amount of such impact/pollution,

		<ul> <li>payment of a fine for negative impact, and</li> <li>imposition of liability in case of violation</li> <li>Other actions at national, sub-national and / or local level to reduce industrial</li> <li>emissions: (can include incentives to move industries to less populated areas here) ???</li> </ul>
REDUCE EMISSIONS FROM TRANSPOR T	<ul> <li>Key transport-related air quality challenges: (ex: vehicle growth, old fleet, dirty fuel, poor public transport etc)</li> <li>Russia has a large and a well-developed modern transport system comprising of busses, trains, metros, trams and taxis.</li> <li>Use of private cars is encouraged as demonstrated by the low fuel cost which stood at USD 0.57 per litre in 2015<sup>3</sup>.</li> </ul>	<ul> <li>Vehicle emission limit: (Euro rating)</li> <li>Vehicle conventional pollutant standards are at Euro 5 from 2014 for new domestic and imported vehicles.</li> <li>There is currently no national auto fuel economy standard, although there is growing government interest in curbing greenhouse gas emissions from transport.</li> <li>Russia adopted a national energy strategy in 2009, aiming at a 40% increase in the energy efficiency of transport within the timeframe of the strategy, through 2030.</li> <li>Fuel Sulphur content: (in ppm):</li> <li>Fuel Lead content:</li> </ul>
	<ul> <li>Private car ownership is high, but with 317 cars per 1000 individuals in 2014</li> <li>During 1995-2006, private car ownership grew by 84%.</li> <li>In 2010, passenger car sales rose by 30% to 1.78 million units and the full growth potential for car ownership is still far from being fully met.</li> <li>A report by the World Bank Group (2008) indicates that Russia can reduce the energy consumption in the transport sector by 41% compared to 2005 levels, indicating that large reductions in emissions from the transport sector can be achieved with current technology.</li> <li>Since 2007, emissions of pollutants from transport have been declining significantly</li> </ul>	<ul> <li>Restriction on used car importation:</li> <li>An age-based taxation system is in place for imported vehicles: 30% tax increase on imported cars older than 1 year; 35% tax increase for imported vehicles from 3 to 5 years old; for vehicles older than 5 year the tax is within 2.5 and 5.8 Euro per cm3 of engine volume.</li> <li>Actions to expand, improve and promote public transport and mass transit: ???</li> <li>Actions to promote non-motorized transport: (ex: include sidewalks and bike lanes in new road projects, car-free areas etc) ???</li> <li>Other transport-related actions:</li> <li>In 2008 a presidential order on "Measures to improve ecological and energy efficiency of the Russian economy" prioritized energy efficiency, including the transport sector.</li> </ul>
REDUCE EMISSIONS FROM OPEN	Outdoor, open burning: (ex: is it commonly done? burning what kinds of wastes? etc)  • Wild fires can alter air quality significantly in Russia	Legal framework: (ex: is burning banned?) ??? Actions to prevent open burning of municipal waste and / or agricultural waste: ???

BURNING: OUTDOOR		
REDUCE	Dominant fuels used for cooking and space	Indoor air pollution regulated: (Yes / No) ???
EMISSIONS FROM OPEN BURNING: INDOOR	<ul> <li>heating:</li> <li>Household heating is a major, and difficult to regulate, source of emissions of PM10.</li> <li>Main issues are obsolescence and low efficiency of combustion in heating units and to some extent</li> </ul>	Promotion of non-grid / grid electrification: ???
		Promotion of cleaner cooking fuels and clean cook stoves: ???
		Other actions to reduce indoor biomass burning, or to reduce its emissions: ???
	behavioural traits of households.	
	Impact:	
	<ul> <li>WHO estimates that indoor air pollution causes 600 premature deaths annually<sup>4</sup></li> </ul>
