PREFACE

The *ENVIRONMENTAL STATISTICS REPORT* is prepared and published by the Statistical Office, Central Planning Division, Ministry of Finance and Economic Planning. This is the second issue of the publication.

The Environmental Statistics Report aims at the widest possible subject coverage consistent with timeliness in publication. New subject areas will be included from time to time as long as the relevant information is available.

Notification of errors, omissions and suggestions for the improvement in the format and content of future publications will be appreciated.

The Statistical Office wishes to say a heartfelt thank you to those individuals in both the Public and Private sectors who have so willingly assisted us with the provision of data. Without their cooperation, this edition would not have been possible.

Source: 2001 Population and Housing Census

Prior to the 1991 Census, the sex ratio in St. Vincent and the Grenadines was always below 1.0, suggesting that there were always more females in the population than males. However, this changed in the 1991 and 2001 Censuses where the sex ratio was 1.00 and 1.02 respectively. Over the history of censuses in St. Vincent and the Grenadines, population change has been positive until the 2001 census. Though the population may not be increasing at an alarming rate, or not at all, populations as a whole put strain on the environment to provide the population with food, waste disposal and habitat.
