

BUILDING E-RESILIENCE: ENHANCING THE ROLE OF
ICT FOR DISASTER RISK MANAGEMENT (DRM)
CASE OF MONGOLIA

UN House, Ulaanbaatar, 15 May 2015

Research Content

1. Introduction

- 1.1 Natural disasters in Mongolia (Natural disaster risk and Relevant government agencies)
- 1.2 Telecom and broadband infrastructure in Mongolia
- 1.3 National synopsis of the ICT readiness aspects of Disaster Risk Management in Mongolia (Access networks, Backbone network infrastructure, Terrestrial fibre optic network, Terrestrial microwave, Satellites)
- 1.4 International infrastructure
- 1.5 Mongolian Energy Grid

2. Trends in applications

- 2.1 Specific, tangible examples in which ICTs have been used for DRR in Mongolia (Mobile and Software, Social media)

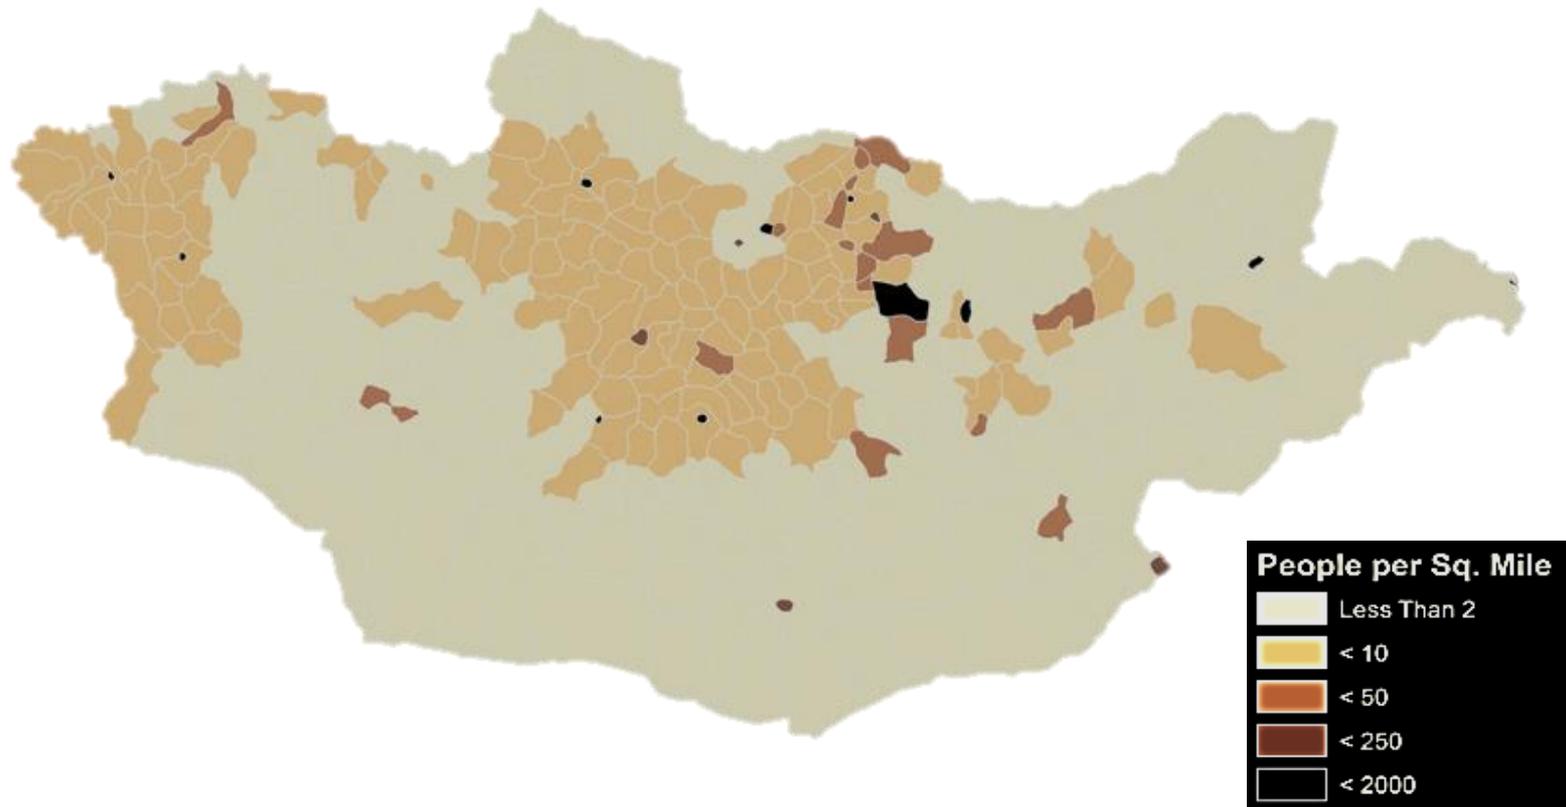

3. The digital divide in Mongolia

4. Lessons learned and recommendations

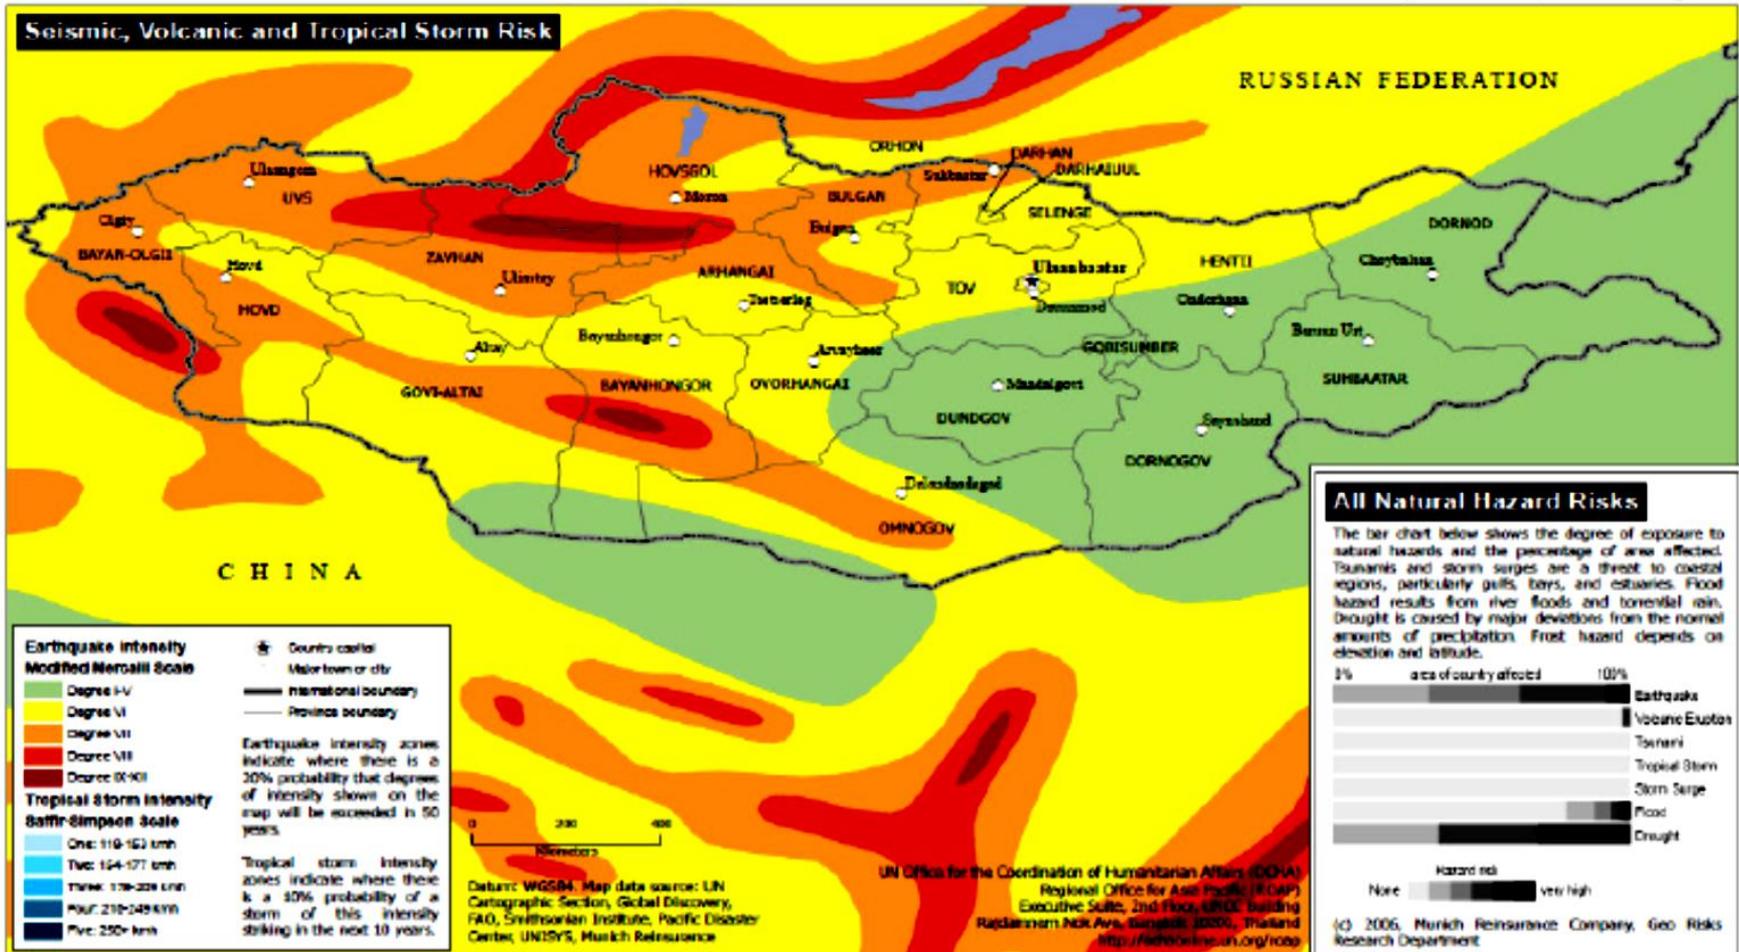

Background Mongolia

- + 3.2 million people
 - + all most half of them live in Ulaanbaatar city (over populated)
 - + Other half sparsely located in 21 provinces
- + Dry weather – low precipitation in summer
- + Siberian strong wind
- + Cold winter with heavy snowfall (dzud)
- + Western Mongolia - mountainous “high-risk” earthquake zone.

Population Density

Natural Hazard Risk of Mongolia
