

TRADE IN VALUE-ADDED: WTO-OECD DATABASE

Courtesy of Sébastien Miroudot (OECD)

What is Trade in Value Added (TiVA)?

- A database containing **estimates** of the **value** that is **added**, by country and by industry, in producing goods and services
- Reveals the source of income generated and the economic significance of both exports and imports
- Based on national I-O or supply use tables, linked to bilateral trade flow data
- Currently covers 57 countries, 18 industries, for 1995, 2000, 2005, 2008 and 2009

Some background

- A horizontal activity (STD/STI/TAD)
- A formal joint-initiative with WTO
- Collaborating with a number of ‘informal’ partners: USITC, IDE-JETRO, MOFCOM, WIOD etc
- With the assistance of a technical expert group.

What does the first release tell us?

Services matter

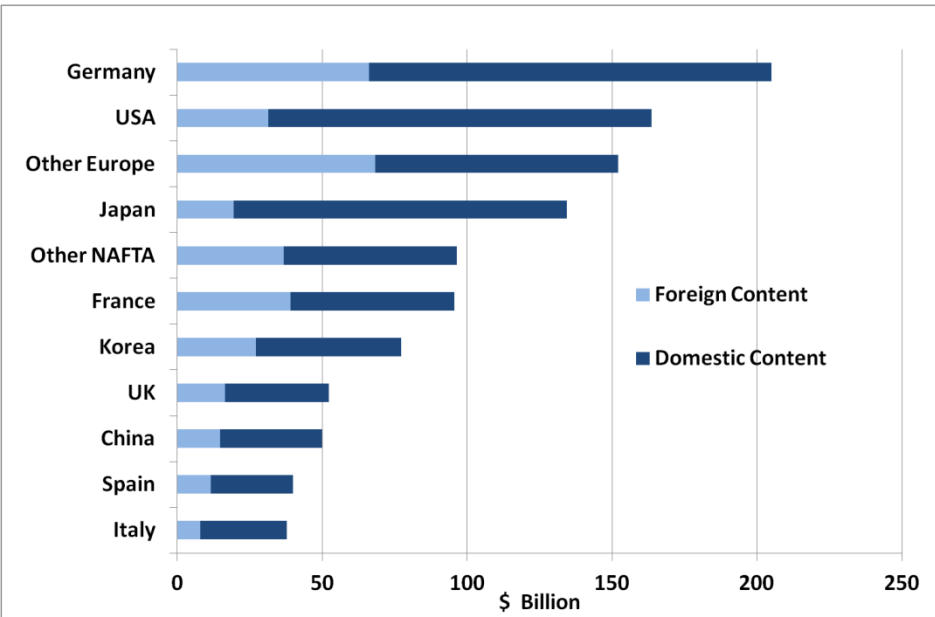

Services Value-Added: % of exports, 2009

Exports require imports

Transport equipment

Electronics

And a significant share of total intermediate imports is used in exports

And Value-Added often returns

Returned Domestic Value-Added: % of total intermediate imports, 2009
