

ICT and Cambodia

Cambodia, is a least developing countries, has considered adopting ICT policy as a part of socio-economic development by encouraging public and private investments in the sector as the country can possess and adequate network to improve the business activities.

In response, the Royal Government of Cambodia has adopted a ICT policy that meets the Millennium Development Goals, aims to improve human capacity, living standard and the quality of the public services. The key policies are to address the human resources development, information security, contents and applications.

National Information Communication Technology Development Authority (NiDA) Website: (www.nida.gov.kh) was established in August, 2000, with a vision to bring the government closer to citizens through computerization.

NiDA is playing a key role as policy maker with e-Government matters. NiDA collects data related to ICT of the governmental agencies to facilitate ICT development policy, master plan and action plan.

Chea Manit, Deputy Secretary General, NiDA
