Research Associate

ADVISOR

Dr Ang Eng Suan
Consultant, UNFPA Malaysia

ACKNOWLEDGEMENT

This project would not have been possible without the support of many people. The Project Team would like to express gratitude and gratefully acknowledge the many agencies and individuals for their invaluable assistance and support in the production of this report:

✚ Dr Ang Eng Suan, Consultant, UNFPA Malaysia for her continuing advice and guidance

✚ All agencies who have given invaluable inputs to complete the documentation:

- National Population and Family Development Board (NPFDB)
- Federation of Reproductive Health Associations, Malaysia (FRHAM)
- Women's Institute of Management (WIM)
- PT Foundation (PTF)
- Women and Health Association of Kuala Lumpur (WAKE)
- Safe Clinic

✚ Mr Azrul Mohd Khalid for his review of the report

✚ and UNFPA staff for their logistic support throughout the production of the report

EXECUTIVE SUMMARY

The study on “Evidence-based Strategies for Sexual and Reproductive Health Linkages and HIV in Malaysia” was funded by UNFPA under the 2011 Unified and Budget Work Plan (UBW) as part of their continuing efforts to strengthen the country’s strategic response on HIV prevention education and delivery of linked SRH and HIV services with dedicated integration of the gender perspective among most-at-risk population groups especially young people and sex workers. It was designed to complement the WHO/UNFPA funded study on Strengthening HIV and SRH linkages in Malaysia in 2010 that focused on the “supply” components of linked HIV/SRH services. In fact the study was aimed to evaluate the “demand” aspects, namely programme efficiency and effectiveness through a desk review and the responses from the recipients of such services.

It was carried out within a four month period from August to November 2011 and comprised of two components; a desk review on the organizations which included certain components of HIV and SRH linkages in their programmes and services and a rapid assessment with service providers, key affected populations, clients and beneficiaries of the programmes or services. It assessed and documented the linkages of SRH and HIV Programmes in the country and provided evidence-based strategies and service models for advocacy, policies and operational plans to strengthen and scaling up the SRH and HIV linkages.

The desk review was carried out at five organisations, namely the Federation of Reproductive Health Associations, Malaysia (FRHAM), the National Population and Family Development Board (NPFDB), Women’s Institute of Management (WIM), PT
