# Acknowledgements

This progress report was prepared by the World Health Organization (WHO) Department of Nutrition and Food Safety, in close collaboration with Resolve to Save Lives, an initiative of Vital Strategies. WHO acknowledges the great support and valuable contributions of colleagues at Resolve to Save Lives. WHO also recognizes the valuable contributions made by other collaborators and partners working together to eliminate industrially produced *trans*-fatty acids (TFA) from the global food supply. In particular, for the preparation of this report, we thank the Global Health Advocacy Incubator and ImagineLaw for developing the Philippines case study, and the European Commission for inputs on the European Union case study.

WHO wishes to acknowledge Dr Ashkan Afshin and his team at the Institute for Health Metrics and Evaluation for providing data and technical expertise.

Acknowledgement is also made of WHO regional and country office colleagues, including those from the WHO European Office for the Prevention and Control of Noncommunicable Diseases in Moscow, and the national counterparts in Member States in each region, in making tremendous efforts to validate country data and information on the status of TFA-related policies.

Special thanks are due to Member States, which are committed, and are taking concrete actions, to achieve the global target of TFA elimination by 2023.

Acknowledgement is also made of Dr Andina Faragher from Biotext in Canberra, Australia, for technical editing of this report.

# Acronyms

CHD	coronary heart disease
COVID-19	coronavirus disease 2019
