

WHO study group on tobacco product regulation

Report on the scientific basis of tobacco product regulation:
eighth report of a WHO study group

World Health
Organization

WHO was established in 1948 as a specialized agency of the United Nations serving as the directing and coordinating authority for international health matters and public health. One of WHO's constitutional functions is to provide objective, reliable information and advice in the field of human health, a responsibility that it fulfils in part through its extensive programme of publications.

The Organization seeks through its publications to support national health strategies and address the most pressing public health concerns of populations around the world. To respond to the needs of Member States at all levels of development, WHO publishes practical manuals, handbooks and training material for specific categories of health workers; internationally applicable guidelines and standards; reviews and analyses of health policies, programmes and research; and state-of-the-art consensus reports that offer technical advice and recommendations for decision-makers. These publications are closely tied to the Organization's priorities, which are to prevent and control disease and ensure equitable health systems based on primary health care and health promotion for individuals and communities. This includes strengthening implementation of the WHO Framework Convention on Tobacco Control (to meet Sustainable Development Goal 3a), thereby contributing to WHO's priority of improving the lives of one billion individuals through enjoyment of better health and well-being. Progress towards better health for all requires global dissemination and exchange of information based on the knowledge and experience of all WHO's Member States and on collaboration among world leaders in public health and the biomedical sciences.

To ensure the widest possible availability of authoritative information and guidance on health matters, WHO ensures broad international distribution of its publications and encourages their translation and adaptation. By helping to promote and protect health and prevent and control disease throughout the world, WHO's publications contribute to achieving the Organization's principal objective – the attainment by all people of the highest possible level of health.

The WHO Technical Report Series makes available the findings of international groups of experts who provide WHO with the latest scientific and technical advice on a broad range of medical and public health subjects. Members of such expert groups serve without remuneration, in their personal capacities rather than as representatives of governments or other bodies; their views do not necessarily reflect the decisions or the stated policy of WHO.

For further information, please contact WHO Press, World Health Organization; 1211 Geneva 27, Switzerland; www.who.int/bookorders; tel.: +41 22 791 3264; fax: +41 22 791 4857; e-mail: bookorders@who.int.

In no event shall WHO be liable for damages arising from its use.

This publication contains the collective views of an international group of experts and does not necessarily represent the decisions or the policies of WHO.

Contents

Participants in the 10th meeting of the WHO study group on tobacco product regulation	ix
Acknowledgements	xiii
Abbreviations and acronyms	xiv
1. Introduction	1
2. Toxicants in heated tobacco products, exposure, health effects and claims of reduced risk	7
Abstract	7
2.1 Background	8
2.2 Toxicants in heated tobacco product (HTP) emissions	10
2.2.1 Laboratory methods for measuring toxicants	10
2.2.2 Nicotine	11
2.2.3 Other toxicants	13
2.3 Exposure and effects of HTPs in vitro and in laboratory animals	20
2.3.1 In-vitro studies	20
2.3.2 Studies in laboratory animals	22
2.4 Exposure of humans to toxicants in HTPs and implications for health	24
2.4.1 Product use and topography	24
2.4.2 Biomarkers of exposure and effect	25
2.4.3 Passive exposure	29
2.4.4 Impact on health outcomes	31
2.5 Review of the evidence for reduced risk or harm with use of HTPs	33
2.5.1 Harm reduction in the context of tobacco products	33
2.5.2 Claims of reduced risk	33
2.6 Summary and implications for public health	37
2.6.1 Summary of data	37
2.6.2 Implications for public health	39
2.7 Research gaps and priorities	40
2.8 Policy recommendations	41
2.9 References	41
3. The attractiveness and addictive potential of heated tobacco products: effects on perception and use and associated effects	49
Abstract	49
3.1 Background	50
3.2 Attractiveness of heated tobacco products (HTPs)	52
3.2.1 Definitions of attractiveness in the context of Articles 9 and 10 of the WHO FCTC	52
3.2.2 Attractive features of HTPs	52
3.2.3 What we can learn from ENDS and ENNDS and relevance to HTPs	56
3.3 Addictiveness of HTPs	57
3.3.1 Addictiveness	57
3.3.2 What can we learn from ENDS and ENNDS and relevance to HTPs	61
3.3.3 Overall abuse liability of HTPs	61

3.4	Effects of the attractiveness and addictiveness of ENDS, ENNDS and HTPs on perceptions of risk and harm and use	62
3.4.1	Contributions of attractiveness and addictiveness to initiation, switching, complementing and quitting conventional tobacco products	62
3.4.2	Learning from ENDS and ENNDS and application to HTPs	63
3.5	Discussion	64
3.5.1	Behavioural implications of different patterns of use among different groups	64
3.5.2	Implications for public health	65
3.5.3	Research gaps, priorities and questions	66
3.5.4	Policy recommendations	67
3.6	Conclusions	68
3.7	References	68
	Annex 3.1. Menthol concentrations in IQOS, cigarettes and JUUL products	74

4. Variations among heated tobacco products: considerations and implications **75**

	Abstract	75
4.1	Background	76
4.1.1	Overview	76
4.1.2	Decision FCTC/COP8(22) of the Conference of the Parties	76
4.1.3	Scope and objectives	76
4.2	Variations among products on the market	77
4.2.1	Overview of product categories and types	77
4.2.2	Variations among heated tobacco products	79
4.2.3	Market distribution of product types and categories	79
4.3	Characteristics and design features of products	81
4.3.1	Temperature profiles of products and operational capabilities	81
4.3.2	Battery characteristics	81
4.3.3	Properties of tobacco inserts, sticks and capsules	81
4.4	Content, emissions and general design of products	82
4.4.1	Content and emissions	82
4.4.2	Nicotine delivery	85
4.4.3	Risk profiles	85
4.4.4	Regulatory implications of the contents of heated tobacco products	86
4.4.5	Regulatory implications of emissions	87
4.5	Variations among products, manufacturers and selling points	88
4.5.1	Manufacturers and selling points	88
4.5.2	Implications for customer pulling power	89
4.6	Discussion	90
4.7	Conclusions	91
4.8	Research gaps, priorities and questions	92
4.9	Policy recommendations	92
4.10	References	94

5. Use of heated tobacco products: product switching and dual or poly product use **99**

	Abstract	99
5.1	Introduction	100
5.2	Information on HTP use at population level	100

5.3 Dynamics of switching from conventional cigarettes to HTPs: Is dual or poly use a transitional or permanent state?	103
5.4 Potential role of HTPs as a substitute for conventional cigarettes	106
5.5 Exposure to nicotine and potential health risks among poly users	107
5.6 Pharmacokinetics in animals	110
5.7 Pharmacokinetics in people	110
5.8 Subjective effects of use of HTPs and conventional cigarettes	115
5.9 Discussion and implications	116
5.10 Research gaps	117
5.11 Policy recommendations	117
5.11.1 Cessation policy	117
5.11.2 Surveillance policy	117
5.11.3 Research policy	118
5.11.4 Cooperation and partnership policy	118
5.12 References	118

6. Regulations on heated tobacco products, electronic nicotine delivery systems and electronic non-nicotine delivery systems, with country approaches, barriers to regulation and regulatory considerations **125**

Abstract	125
6.1 Background	126
6.1.1 Introduction and the request of the Conference of the Parties (FCTC/COP8(22))	126
6.1.2 Scope and objectives	127
6.1.3 Sources	128
6.2 Regulatory mapping of novel and emerging nicotine and tobacco products	128
6.2.1 Availability of HTPs	128
6.2.2 Product classification	129
6.2.3 Regulatory frameworks and measures to reduce tobacco demand	134
6.3 Considerations and barriers to regulation, implementation and enforcement of policies	141
6.3.1 Regulatory considerations in implementing policies	141
6.3.2 Barriers to implementing and enforcing policies	143
6.3.3 Other considerations and unintended consequences	143
6.4 Discussion	144
6.5 Conclusions	145
6.6 Research gaps	146
6.7 Policy recommendations	146
6.8 References	147

7. Estimation of exposure to nicotine from use of electronic nicotine delivery systems and from conventional cigarettes **151**

Abstract	151
7.1 Background	152
7.2 Exposure to nicotine from electronic nicotine delivery systems (ENDS)	154
7.2.1 ENDS nicotine emission	154
7.2.2 Influence of ENDS electrical power on nicotine emission	154
7.2.3 Contribution of the concentrations of nicotine and other compounds in ENDS liquids to nicotine emissions	155

7.3 Overview of exposure to accompanying substances	156
7.4 Nicotine delivery from ENDS	157
7.5 Behavioural patterns of exposure according to use	158
7.5.1 Definition of user groups and user patterns	158
7.5.2 Factors that influence behavioural patterns	158
7.6 Passive exposure to nicotine and other toxicants	160
7.7 Nicotine flux	161
7.8 Discussion	163
7.9 Conclusions	164
7.10 Research gaps, priorities and questions	165
7.11 Policy recommendations	166
7.12 References	166

8. Exploration of methods for quantifying individual risks associated with electronic nicotine and non-nicotine delivery systems and heated tobacco products: impact on population health and implications for regulation **175**

Abstract	175
8.1 Background	176
8.1.1 Challenges to quantifying risk	178
8.2 Risk assessment and quantification of risks associated with use of ENDS and ENNDS	180
8.2.1 Health risks associated with specific ingredients or unintentionally added substances	181
8.2.2 Potential health effects of ENDS and ENNDS	184
8.2.3 Risks for bystanders	186
8.3 Methods for quantifying risk	186
8.3.1 Threshold of toxicological concern	189
8.3.2 Risk assessment based on individual compounds	189
8.3.3 Relative risk approaches	190
8.3.4 Margin-of-exposure approach	190
8.3.5 Non-carcinogenic effects	191
8.3.6 Evaluation frameworks	191
8.4 Heated tobacco products	194
8.5 Implications for regulation	194
8.6 Discussion	197
8.7 Recommendations	198
