CONTENTS

Acknowledgements	v
Abbreviations and acronyms	vi
Definitions	vii
Executive summary	viii
1. Introduction	1
1.1 Advantages of the survey method	1
1.2 Potential challenges related to the feasibility of the survey method	2
1.3 Overview	2
2. Survey planning: framework for assessing country readiness to implement surveys of acquired HIV drug resistance leveraging remnant viral load specimens	3
2.1 First step: assess the mandatory criteria	3
2.2 Second step: assess laboratory- and country-level data availability	5
2.3 Third step: assess viral load testing coverage and patient-level data completeness	6
2.4 Determining readiness to implement acquired HIV drug resistance surveys leveraging remnant viral load specimens	7
3. Survey methods	9
3.1 Overview	9
3.2 Survey outcomes	10
3.3 Eligibility criteria for remnant specimens	10
3.4 Interpreting the survey results	11
3.5 Survey sample size	11
3.6 Sampling procedures	13
3.7 Observed sample size	13
3.8 Data analysis	14
4. Implementation considerations	15
4.1 Convention for assigning survey identification numbers	15
4.2 Data extraction	15
4.3 Reporting data	15
4.4 Implementation overview: practical guide	16
5. Alternative approach for countries with viral load coverage $\geq 60\%$ but availability of required survey variables $< 80\%$	17
5.1 Overview	17
5.2 Viral load laboratory- and country-level data needed to implement this survey	17
5.3 First design phase: determining the required sample sizes and number of clinics to sample	18
5.4 Interventions and specimen collection for sampled clinics	20
5.5 Second design phase: allocating sample sizes across sampled clinics	20
5.6 Sampling procedures	21
5.7 Analysis	21

References	22
Annex 1. Checklist to assess country readiness to implement acquired HIV drug resistance surveys leveraging remnant viral load specimens	23
Annex 2. Modelled impact of missing data on acquired HIV drug resistance prevalence estimates	26
Annex 3. Statistical methods	28
A3.1 Calculating standard sample sizes	29
A3.3 Allocating samples across DTG and non-DTG strata	29
A3.4 Size inflation for genotyping failure	30
A3.5 Allocating samples across all viral load testing laboratories in a country	30
A3.6 Example: sample size calculations and allocation across strata using the formulas detailed in Annex 4	30
A3.7 Sampling procedures and observed sample size	32
A3.8 Analysis	33
A3.9 Stata code for the standard method described in Section 3	38
Annex 4. Example: sample size calculations and allocation across strata using the methods described in Section 3	44
Annex 5. Sample size calculations and allocation across strata among children and adolescents: special considerations	47
A5.1 The number of children and adolescents receiving DTG-containing regimens is few	47
A5.2 Budget considerations preclude assessing survey outcome by DTG and non-DTG-containing regimens among children and adolescents	48
Annex 6. Statistical methods for alternative survey activity described in Section 5	50
A6.1 Determining the required sample sizes, overall and by DTG and non-DTG eligible case specimens	52
A6.2 Inflating sample size for design effect and genotyping failure	53
A6.3 Determining the number of clinics to sample	54
A6.4 Allocating the number of clinics to sample across laboratories	55
A6.5 Interventions and specimen collection for sampled clinics	55
A6.6 Example: sample size calculations and allocation across strata using the formulas detailed in this annex	56
A6.7 Analysis	59
A6.8 Stata code for the alternative method described in Section 5	65
Annex 7. Example: sample size calculations and allocation across strata using the methods described in Section 5	72
A7.1 Example: the first design phase to determining the required sample sizes and number of clinics to sample	72
A7.2 Example: the second design phase to allocate the sample size of eligible case specimens to each sampled clinic	75
Annex 8. Budget considerations	77

ACKNOWLEDGEMENTS

Silvia Bertagnolio (WHO Department of Global HIV, Hepatitis and STI Programmes) conceived and coordinated the development of this document, in collaboration with Michael R. Jordan (Division of Geographic Medicine and Infectious Diseases, Tufts Medical Center, Boston, MA, USA and the Levy Center for Integrated Management of Antimicrobial Resistance, Tufts University, Boston, MA, USA). WHO acknowledges the technical inputs on Bethany Hett-Gauthier and Stephanie Wu (Harvard University, Cambridge, MA, USA) who developed the statistical methods. WHO acknowledges the technical inputs of Amalia Giron and Seth Inzaule (Consultants, WHO Department of Global HIV, Hepatitis and STI Programmes). WHO thanks the United States Centers for Diseases Control and Prevention (Elliot Raizes, Juliana Da Silva, Amitabh Suthar, and Sherry Pals) and Fatim Cham (WHO-AFRO) and Giovanni Ravasi (PAHO) for the technical inputs to the initial draft of the document and the WHO HIVResNet Technical Working Group on Surveillance and Monitoring (Andrew Phillips, Natalie Dean, Derval Igoe, Steve Reynolds, Mathieu Maheu-Giroux, Urvi Parikh, Gillian Hunt, Emiliano Bisso, David Dunn, Chris Archibald, Charles Holmes, Philippe Glaziou, Santiago Avila, and Mohammad Chakroun) for their contribution. WHO thanks Rudo A. P. Kuwengwa (National ART programme, Eswatini) and Christine Watera (Uganda Virus Research Institute, Uganda), for critical input with respect to implementation considerations and thanks Mathieu Maheu-Giroux (McGill University, Montreal, Canada) for the mathematical modeling that informed the method section.
