Preface

Chapter 1

Global health spending in transition – More domestic, more public	5
---	---

Chapter 2

The health financing transition – Under fast economic growth	15
--	----

Chapter 3

The institutional transition – From models to functions	27
---	----

Chapter 4

Making the financing transition work – For primary health care	37
--	----

Annexes

1.1 Low and lower middle income countries with donor spending at more than a fifth of health spending, 2017	47
2.1 Fast economic growth countries included in this chapter	48
4.1 The 88 countries with HC/PHC data, latest year of available data shown	49

Boxes

1 From the political declaration of the high-level meeting on universal health coverage to build a healthier world September 23, 2019 UN General Assembly	2
1.1 Catastrophic health spending and out-of-pocket spending as a share of total health expenditure – Two different concepts	10
1.2 Methods for tracking development assistance for health	11
2.1 The health financing transition	16
2.2 Fast-growing economic countries	16
3.1 Hungary: Same system, changing sources	31
4.1 Primary health care spending: Global definition for cross-country comparison	39

Figures

1.1	Health spending is growing faster than GDP	6
1.2	With rapid global economic growth, middle income countries' share of global health spending grew gradually	6
1.3	Richer countries spend more on health, but there are large variations among countries of similar incomes	7
1.4	Overall health spending growth was dominated by government funding	8
1.5	The transition to more public spending on health continues	8
1.6	Across income groups, health systems are becoming less reliant on out-of-pocket spending	9
1.7	Out-of-pocket spending is still the largest source funding health in low income countries	9
1.8	Donor funding is a very small share of global health spending	11
1.9	Donor funding has been falling since 2014	12
1.10	High income countries are devoting smaller shares of GDP to development assistance for health	12
1.11	Donor funding is shifting to countries most in need	12
2.1	Fast economic growth countries between 2000 and 2017	17
2.2	Between 2000 and 2017, the growth of health spending outpaced GDP in most fast-growing economies	17
2.3	Most fast-growing economies increased tax revenue and government spending	18
2.4	Both government and out-of-pocket spending grew but public policy makes a difference	19
2.5	Growth is not enough – prioritizing health in budgets is key	20
2.6	Changes in government spending do not seem to be clearly associated with changes in service coverage	20
2.7	Higher government spending on health is associated with less inequality among the health financing transition countries	22
2.8	Larger shares of government spending in total health spending tend to go with lower catastrophic health spending for countries making the health financing transition	22
2.9	Most of the 42 fast-growing economy countries still receive aid for health	23
2.10	The health financing transition is mainly driven by public policy	23
3.1	126 countries had social health insurance in 2017	29
3.2	The share of social health insurance spending increased in middle income countries	30
3.3	Social health insurance spending grew faster than other health spending in low and middle income countries	30
3.4	Budget transfers to SHI are more common in upper middle and high income countries	32
3.5	Social health insurance does not mean better service coverage	33
4.1	PHC data are available in more countries	40
4.2	GDP per capita and primary health care spending per capita go hand in hand	40
4.3	The composition of spending on PHC differs between countries at different incomes	41
4.4	The share of health spending on primary health care is greater in lower income than in higher income countries	42
4.5	Primary health care takes a greater share of government health spending in low income than in higher income countries	43
4.6	Less primary health care is funded by government spending in low and lower middle income countries	43
4.7	Governments fund little medicine or other medical goods	43
4.8	The source of most prevention spending in low income countries is attributed to external aid	44
4.9	The share of primary health care funded by government is associated with better service coverage in low and lower middle income countries	44

Tables

1.1	2017 key health expenditure indicators, by income group	10
2.1	Health financing transition countries, government spending and health priority	21
3.1	Characteristics and classification of Thailand's three main financing arrangements	28
4.1	A 1% of GDP increase in public spending on primary health care would yield a major increase in primary health care spending per capita	41
