FOREWORD

The Ministry of Health of the Kingdom of Cambodia and the World Health Organization (WHO) are pleased to present the *Cambodia–WHO Country Cooperation Strategy 2016–2020*, which provides a basis for collaboration on health between Cambodia and WHO over the next five years. We trust that this cooperation, and the joint implementation of this strategy, will contribute to attainment of the highest possible level of health by all people in Cambodia.

Cambodia has enjoyed great success in improving health outcomes in recent decades, especially significant reductions in maternal mortality, as documented in the Cambodia Demographic and Health Survey 2014. Cambodia also met most of the health-related Millennium Development Goals by the end of 2015.

The country's health system has been expanded and strengthened. Access to health services has increased; coverage of social health protection schemes has expanded, along with increased commitment by the Government to finance essential services and commodities. There is now stronger stewardship in regulation and governance, and greater preparedness for pandemic-prone diseases.

Still, significant challenges remain as Cambodia moves towards universal health coverage. Challenges include improving the quality of care and equitable distribution of health benefits across population groups, reorienting health systems to respond to epidemiologic transitions, ensuring the country's capacity to contribute to global health security, and addressing the social, economic and environmental determinants of health.

This Country Cooperation Strategy (CCS) was developed on the foundation of *Third Health Strategic Plan 2016–2020*, which highlights the Government's commitment to UHC. This CCS is a renewal of the 2009–2015 CCS — and a reaffirmation of our shared commitment to support national priorities, goals and strategies.

Dr Mam Bunheng
Minister of Health
Kingdom of Cambodia

Dr Shin Young-soo
Regional Director for the Western Pacific
World Health Organization
