The designations employed and the presentation of the material in this draft do not imply the expression of any opinion whatsoever on the part of the World Health Organization concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted lines on maps represent approximate border lines for which there may not yet be full agreement.

The mention of specific companies or of certain manufacturers' products does not imply that they are endorsed or recommended by the World Health Organization in preference to others of a similar nature that are not mentioned. Errors and omissions excepted, the names of proprietary products are distinguished by initial capital letters.

All reasonable precautions have been taken by the World Health Organization to verify the information contained in this draft. However, the printed material is being distributed without warranty of any kind, either expressed or implied. The responsibility for the interpretation and use of the material lies with the reader. In no event shall the World Health Organization be liable for damages arising from its use. This draft does not necessarily represent the decisions or the stated policy of the World Health Organization.

Proposal for Assignment of Biological Qualifiers (BQ)

Executive summary

A scheme is proposed in which a unique identification code named a Biological Qualifier (BQ) is assigned to all biological substances having (or eligible to have) INNs. The BQ is an additional and independent element used in conjunction with the INN to uniquely identify a biological substance to aid in the prescription and dispensing of medicines, pharmacovigilance and the global transfer of prescriptions. The BQ is a code formed of four random consonants in two 2-letter blocks separated by a 2-digit checksum. The BQ scheme is designed to provide a uniform global means of identification to avoid the proliferation of differing national schemes.

The scheme will be administered by the WHO INN Secretariat who will set up and maintain a secure database of the BQ, INN, the BQ Applicant and relevant manufacturing and regulatory data. The BQs will be immediately assigned to BQ Applicants by an automated online system for use by relevant Marketing Authorisation Holders (MAHs) and National Regulatory Authorities (NRAs). The BQ Applicant will provide the required data to the WHO INN and will update the data when changes occur. An initial fee will be charged to register a BQ which will also cover any updates required so that the scheme is self-funding. Only security-approved WHO Secretariat staff will be able to enter and edit information on the database. All information that is already in the public domain will be available to all on the WHO website. Access to confidential information on the database will be restricted to read-only for NRAs and to their own applications for BQ Applicants.

Introduction and Background Information

Biological medicinal products are an increasingly important sector of therapeutic and prophylactic medicines. Biological active substances now comprise more than 40% of applications to the INN Programme and the percentage is increasing. By their nature biotechnological products are not composed of a single, pure substance, but are invariably complex, microheterogeneous mixtures of isoforms of the desired substance.

An INN is specific to a given defined substance regardless of the manufacturer and manufacturing site even though the profile of impurities may not be qualitatively or quantitatively the same. Biological substances are assigned an INN by the general principles applicable to all INN and by a specific framework developed especially for them (*see [INN for Biological and Biotechnological Substances \(a review\)-2013- INN Working Document 05.179](#)*).

While a single INN has been adequate to identify simple, well-characterised chemical substances, the complex, microheterogeneous nature of biological medicines does lead to differing efficacy and safety profiles of these substances. For this reason differing glycoforms of the same protein were distinguished by adding a Greek letter to the INN. Several national regulatory authorities proposed naming policy or have actually named biological medicines using a prefix, suffix or separate identifier to distinguish conjugates, glycoforms or biosimilars (e.g. Japan, Australia and USA). To avoid proliferation of separate and distinct national qualifier systems, some drug regulatory authorities have requested the INN Programme to develop and administer a voluntary and global complementary nomenclature scheme. This was begun in 2012 and has involved several rounds of feedback from stakeholders in general and NRAs in particular, during which it was clearly indicated

by all sectors that the WHO should devise and operate the BQ scheme, applicable prospectively and, where possible, retrospectively to all biological substances assigned INNs, that could be adopted on a voluntary basis by any regulatory authority and would be recognised globally. The proposed scheme has evolved from a three letter random code to a four letter random code incorporating a digital checksum.

It is acknowledged that the BQ will only be as useful as the breadth with which it is taken up globally, how widely it is recognised and its purpose understood by prescribers, dispensers, patients and those involved in pharmacovigilance. It is therefore necessary that as well as voluntary acceptance of the scheme, regulatory authorities and BQ Applicants should take appropriate steps to bring attention to and explain the existence and purpose of the BQ to these groups of people.

The Biological Qualifier (BQ) scheme

Purpose

The scheme is intended to provide a unique identification code (Biological Qualifier or BQ), distinct from the INN, for all biological substances that are assigned INNs. The BQ is an additional and independent element used in conjunction with the INN for a biological substance to uniquely identify the active substance in a biological product distributed by a MAH. It is envisaged that the BQ will assist in the identification of biological substances for:

- prescription and dispensing of medicines (in those jurisdictions requiring it);
- pharmacovigilance (in those jurisdictions requiring it); and
- aid transfer of prescriptions globally.

The BQ scheme is designed to provide a uniform global means of identification for biological substances and so avoid the proliferation of separate and distinct schemes developed by individual regulatory authorities.

Usage of the BQ

Adoption of the BQ scheme is a voluntary decision of the individual regulatory authority. The scheme is overseen by the WHO INN Expert Group and administered and operated by the WHO INN Secretariat. The scheme is intended to apply to as many biological medicines as possible, so while it will apply prospectively, mechanisms to allow retrospective application are being investigated. The use of the BQ offers a means (a) which uniquely identifies the drug substance even if used alone and/or (b) of crosschecking other information supplied in a prescription/dispensing or pharmacovigilance setting.

The BQ code

The code will consist of four random consonants and an optional two digits as a checksum. The WHO INN will issue the BQ letters with a checksum, but it is at the discretion of the individual regulatory authority whether the checksum is used as part of the BQ. The form of the BQ may take:

- four letters;
- four letters followed by the checksum; or
- two letters, two digits and two letters, thus mimicking car registration plates to be more memorable.

For instance:

TRADENAME	INN	BQ
-----------	-----	----

GROKINO	anonutropin alfa	bxsh
GROKINO	anonutropin alfa	bxsh08
GROKINO	anonutropin alfa	bx08sh

Each code issued will be assigned to applicants at random by an automated online system. The choice of letters used will be made to facilitate transliteration into various languages and to avoid meaningful, trademarked or inappropriate words or acronyms being used. The use of four letters offers 160 000 codes (20^4) (vowels being excluded) and is expected to provide sufficient capacity and flexibility for the foreseeable future.

The checksum is calculated from the four randomly assigned consonants and their position and gives the ability to detect errors in transcription, both the use of an erroneous letter and the transposition of the correct letters.

Who should apply for a Biological Qualifier

The applicant for a BQ (termed the BQ Applicant) is foreseen to be a corporate body that makes or manages the making of a single substance by a single process controlled by the same quality system globally. This body applies for a BQ for global use and allows its use for substance made in all manufacturing sites demonstrated to be of a similar standard of quality and by all marketing authorisation holders (MAH) distributing products which contain the substance. Should a regulatory authority find that a manufacturing site does **not** produce a comparable product, they may require application for a different BQ for that manufacturing site, but the two BQ's would be hyperlinked in the INN BQ database.

Application for a Biological Qualifier code

The application for a Biological Qualifier code is made to the WHO INN Secretariat by the BQ Applicant at the time of submission of a marketing authorisation application to a regulatory authority. The assigned BQ code is immediately provided by the WHO to the BQ Applicant through an automated online system. The BQ Applicant can either:

- supply the BQ directly to regulatory authority/ authorities when the BQ Applicant is also the Marketing Authorisation Holder (MAH); or
- provide the BQ to the MAH making the authorisation application.

A fee for each application is payable so that the scheme is self-funding. No further fee is levied for processing updates to the information submitted for the BQ code. Consequently, the initial fee will be set taking this into consideration.

For situations wherein a previously licensed biological drug substance is to be assigned a BQ at the requirement of a regulatory authority, the same application procedure occurs with the
