Toolkit to develop a national strategic plan for TB prevention, care and control

Methodology on how to develop a national strategic plan

World Health Organization, Geneva, Switzerland

in collaboration with the

WHO Collaborating Centre for TB and Lung Diseases, Fondazione S. Maugeri, Care & Research Institute, Tradate, Italy

Acknowledgements

This document is part of a set of materials, which are included in a toolkit prepared by the Global TB Programme of the World Health Organization (WHO), designed to guide tuberculosis (TB) programme planning. It describes the process of development of a national strategic plan (NSP).

The development of the document on the methodology and the training material package was coordinated by Giuliano Gargioni, Malgorzata Grzemska, Soleil Labelle and Salah-Eddine Ottmani from the Technical Support Coordination Unit of the WHO Global TB Programme. Significant input to finalize these two components was provided by Giovanni Battista Migliori from the WHO Collaborating Centre for Tuberculosis and Lung Diseases, Fondazione S. Maugeri, Care and Research Institute, Tradate, Italy.

The following people also provided technical input:

Inés Garcia Baena, Vineet Bhatia, Francesco Blasi, Miranda Brouwer, Rosella Centis, David Collins, Lia D'Ambrosio, Pierpaolo de Colombani, Daniel Kibuga, Ryuichi Komatsu, Linh Nhat Nguyen, Wilfred Nkhoma, Paul Nunn, Kefas Samson, Alka Aggarwal Singh, Antonio Spanevello, Mukund Uplekar, Remi Verduin, Diana Weil and Kasandji Henriette Wembanyama.

The training package was field-tested in two workshops in Islamabad (Pakistan) in August 2013 and three subsequent global workshops in Cepina (Italy) in November 2013, Divonne (France) in February 2014, and Rabat (Morocco) in March 2014.

This product was funded by United States Agency for International Development (USAID) under the TB CARE I Collaborative Agreement No. AID-OAA-A-10-0020. The contents are the responsibility of TB CARE I and do not necessarily reflect the views of USAID or the United States Government.

Foreword

Strategic planning is a fundamental component of the management of a TB programme and constitutes the key instrument to efficiently implement the policies for TB prevention, care and control in a country, over a defined period of time.

Based on the results of a thorough situation analysis, a national strategic plan (NSP) for TB prevention, care and control should clearly identify for the TB programme manager, its partners and other stakeholders the goal and objectives that need to be achieved, as well as the strategic interventions and activities to reach them. A sound NSP should specify the budget needed to implement these interventions and activities. It should also clearly describe how these interventions and activities will be operationalized, as well as how their implementation will be monitored and their effect evaluated. Moreover, it should provide information on the technical assistance needed from national or international partners (or experts) to make this operationalization effective.

This toolkit has been developed to assist in formulating a NSP. Its various components were assembled to help the NTP managers and all stakeholders involved in the management of TB programmes develop new NSPs or improve the existing ones based on the procedures described across five key elements.

The WHO Stop TB Strategy 2006—2015 has been instrumental in providing guidance to achieve the 2015 global targets for reductions in the burden of disease caused by TB. The end of 2015 will mark the transition between the Millennium Development Goals (MDGs) established in 2000 and a post-2015 development framework. Within this broader context, the World Health Assembly in 2014 endorsed the new End TB Strategy with the associated ambitious unprecedented targets and with a vision of ending the TB epidemic by 2035.

The End TB Strategy expands well beyond the traditional TB approach. It is based on three clear-cut pillars: the first includes all innovations in care, prevention and control; the second calls for bold policy decisions and for social protection of people affected by the disease; the third promotes research for new tools and innovations in the areas of prevention, diagnosis and treatment. As countries move forward in preparing new NSPs, it is essential that this process gives due consideration to the new strategy while using this toolkit to define the steps needed for a robust and comprehensive NSP.

This toolkit provides a clear methodology for development of sound and visionary NSP's taking into consideration the End TB Strategy. A sound and bold plan is, in fact, the starting point to deliver better care and achieve control of TB towards, ultimately, its elimination as a public health problem.
