The designations employed and the presentation of the material in this publication do not imply the expression of any opinion whatsoever on the part of the World Health Organization concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted lines on maps represent approximate border lines for which there may not yet be full agreement.

The mention of specific companies or of certain manufacturers' products does not imply that they are endorsed or recommended by the World Health Organization in preference to others of a similar nature that are not mentioned. Errors and omissions excepted, the names of proprietary products are distinguished by initial capital letters.

All reasonable precautions have been taken by the World Health Organization to verify the information contained in this publication. However, the published material is being distributed without warranty of any kind, either expressed or implied. The responsibility for the interpretation and use of the material lies with the reader. In no event shall the World Health Organization be liable for damages arising from its use.

Acknowledgements

This report on the initial health risk assessment from the nuclear accident that followed the 2011 Great East Japan Earthquake and Tsunami is the product of an International Expert Working Group established by the World Health Organization (WHO).

WHO thanks all the contributors, with special thanks to the following experts:

Makoto Akashi
Billy Amzal
Lynn Anspaugh
Anssi Auvinen
Nick Gent
Peter Jacob
Dominique Laurier
Charles Miller
Ohtsura Niwa
Roy Shore
Richard Wakeford
Linda Walsh
Wei Zhang

WHO is particularly grateful to Dr Lynn Anspaugh and Dr Roy Shore for their instrumental assistance as chairs of the first and second expert meetings, respectively. Thanks are also expressed to Dr Linda Walsh and Dr Wei Zhang for their efficient and extensive work on risk modelling and quantification. The contribution of Dr Anssi Auvinen, Dr Linda Walsh, Dr Dominique Laurier and Mr Tangui Barré to the technical editorial work is gratefully acknowledged.

WHO also acknowledges the participation, as observers, of representatives of the United Nations Scientific Committee on the Effects of Atomic Radiation (UNSCEAR), the International Labour Organization (ILO) and the Government of Japan.

A WHO Secretariat, comprising Dr Maria del Rosario Pérez, Dr Emilie van Deventer, Dr Angelika Tritscher and Dr Maria Neira coordinated the development of this report.

Acknowledgements	1
Executive summary	7
Preface	10
1. Introduction	12
1.1 Motivation	12
1.2 Purpose and audience	13
1.3 Scope	13
1.4 Overview of the process	14
1.5 Procedures	16
2. Hazard identification	17
2.1 Identification of the source term	17
2.2 Identification of health hazards due to ionizing radiation	18
2.2.1 Carcinogenic effects	19
2.2.2 Health effects other than cancer	22
3. Dose-response relationship	25
3.1 Non-threshold dose-response models for stochastic effects	25
3.2 Multiplicative and additive risk models	26
3.3 Lifetime risk concepts	26
3.3.1 Lifetime baseline risk	26
3.3.2 Lifetime attributable risk	27
3.3.3 Lifetime fractional risk	28
3.3.4 Cumulative risk for a segment of life	29
3.3.5 Other measures of lifetime risk	29
3.4 Cancer risk models	29
3.5 Transfer of excess risk between populations	30
3.6 Dose and dose rate effectiveness factor	32
3.7 Threshold dose-response models for deterministic effects	33
4. Exposure assessment	35
4.1 Doses for the general population	35
4.1.1 Pathways of exposure for the general population	36
4.1.2 WHO preliminary dose estimation for the first year following the accident	38
4.1.3 Calculation of first-year organ doses	40
4.1.4 Calculation of lifetime doses	40
4.2 Doses for the NPP emergency workers	44
4.2.1 Pathways for workers exposure	46
4.2.2 Radiation protection of female workers	46
4.2.3 Workers exposure assessment reported by TEPCO	46
4.2.4 Exposure scenarios for workers at the Fukushima Daiichi NPP	48

5. Risk characterization.	51
5.1 Input data	52
5.1.1 Dose for the general population	52
5.1.2 Dose for the emergency workers	52
5.1.3 Health statistics data	53
5.2 Cancer risk characterization in the general population	53
5.2.1 Overview of results	53
5.2.2 Results of lifetime risk calculations	54
5.2.3 Temporal patterns of the risks	57
5.3 Cancer risk characterization for the emergency workers	63
5.4 Non-cancer risk characterization	66
5.4.1 General population	66
5.4.2 Emergency workers	67
6. Discussion	70
6.1 Factors influencing the radiation-related health risks	70
6.1.1 Age at exposure	70
6.1.2 Time since exposure and attained age	72
6.1.3 Sex	72
6.2 Main sources of uncertainty	73
6.2.1 Exposure estimates for the general population	73
6.2.2 Health statistics	76
6.2.3 Risk models applied	76
6.2.4 Extrapolation of data from moderate doses to low doses	78
6.3 Specific considerations	78
6.3.1 Occupational radiation safety	78
6.3.2 Health burden	79
6.3.3 Prenatal exposure and carcinogenic risks	79
6.3.4 Assessment of all solid cancer risks	80
6.3.5 Iodine status and thyroid disease	80
6.4 Summary of key choices	81
7. Public health considerations	84
7.1. Public health response during the emergency phase of the Fukushima Daiichi NPP accident	84
