ACKNOWLEDGEMENTS

This case-study is part of a series of such studies of malaria elimination conducted by the Global Malaria Programme of the World Health Organization (WHO) and the Global Health Group at the University of California, San Francisco. The two programmes wish to acknowledge the financial support of the Bill & Melinda Gates Foundation in preparing the case-study series. The Asia Pacific Malaria Elimination Network provided the forum for discussing the objectives of this study and for disseminating the findings.

An advisory committee, the Case Study Advisory Committee, convened jointly by the two groups, provides input and technical advice on the case-study series. The group has representatives of several entities, including the Asia Pacific Malaria Elimination Network and the Malaria Elimination Group, which consists of international experts convened by the University of California, San Francisco Global Health Group to decide on technical and programme issues for malaria elimination.

Ms Cara Smith Gueye collected and analysed the data and drafted the report, in collaboration with Dr Gawrie N.L. Galappaththy of the Sri Lanka Anti-Malaria Campaign and Dr Rabindra R. Abeyasinghe of the WHO country office in Papua New Guinea. The authors would like to thank the Honourable Minister of Health of Sri Lanka, Maithripala Sirisena, his staff and the Director of the Anti-Malaria Campaign, Dr Sarath Deniyage, for their support and assistance in preparing this case-study.

The authors also acknowledge with thanks the people who participated in the collection and analysis of country information, including Dr Perera, Dr Rasika, Mr Jayanetti, Ms Ekanayake and their staff. The following individuals reviewed the case-study and provided important feedback: Roly Gosling, Allison Phillips, Rossitza Kurdova-Mintcheva, Richard Cibulskis, Robert Newman and Aafje Rietveld.

The authors remain responsible for any errors and omissions.

ACRONYMS AND ABBREVIATIONS

ACD	Active case detection
ACT	Artemisinin-based combination therapy
AMC	Anti-Malaria Campaign
API	Annual parasite index
DDT	dichlorodiphenyltrichloroethane
G6PD	Glucose-6-phosphate dehydrogenase
IRS	indoor residual spraying
ITN	insecticide-treated net
LLIN	long-lasting insecticidalnet
PCD	Passive case detection
PCR	polymerase chain reaction
RDT	Rapid diagnostic test
WHO	World Health Organization
