Requests for permission to reproduce or translate WHO publications – whether for sale or for noncommercial distribution – should be addressed to WHO Press through the WHO web site (http://www.who.int/about/licensing/copyright_form/en/index.html).

The designations employed and the presentation of the material in this publication do not imply the expression of any opinion whatsoever on the part of the World Health Organization concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries. Dotted lines on maps represent approximate border lines for which there may not yet be full agreement.

The mention of specific companies or of certain manufacturers' products does not imply that they are endorsed or recommended by the World Health Organization in preference to others of a similar nature that are not mentioned. Errors and omissions excepted, the names of proprietary products are distinguished by initial capital letters.

All reasonable precautions have been taken by the World Health Organization to verify the information contained in this publication. However, the published material is being distributed without warranty of any kind, either expressed or implied. The responsibility for the interpretation and use of the material lies with the reader. In no event shall the World Health Organization be liable for damages arising from its use.

Acknowledgements

This report on the initial evaluation of radiation [exposure](#) from the nuclear accident after the 2011 Great East Japan Earthquake and Tsunami is the result of the work of an International Expert Panel convened by the World Health Organization (WHO). The work relied on the contribution of more than 30 scientists, some of whom participated in expert panel meetings to develop this document and some of whom contributed within their institutions.

WHO is particularly grateful to Ms Jane Simmonds (Health Protection Agency, HPA, United Kingdom) for her efficient and instrumental contribution as Chair of the expert panel. A scientific editorial group was part of the production and reviewing process for the preparation of this report, and their assistance is gratefully acknowledged: Dr Stephanie Haywood (Health Protection Agency, United Kingdom), Dr Philippe Verger (WHO), Dr Maria del Rosario Pérez (WHO) and Dr Emilie van Deventer (WHO).

Thanks are expressed to all the participants and contributors, with special gratitude for their major contributions to the following panel members:

Lynn Anspaugh
Mikhail Balonov
Carl Blackburn
Florian Gering
Stephanie Haywood (Rapporteur)
Gerhard Proehl
Shin Saigusa
Jane Simmonds (Chair)
Ichiro Yamaguchi

WHO also acknowledges the contribution of other experts from the Food and Agriculture Organization of the United Nations, the International Atomic Energy Agency, and the International Agency for Research on Cancer as members of the panel; and the participation of representatives of the United Nations Scientific Committee on the Effects of Atomic Radiation and representatives of the Government of Japan, as observers.

The WHO Cluster of Health Security and Environment financially supported the development of this report.

Executive summary	7
Preface	10
1. Introduction	12
1.1 Background	12
1.2 Purpose and audience	13
1.3 Scope	15
1.4 Overview of the methodology	15
1.5 Endpoints and scenarios	16
1.5.1 Dosimetric endpoints	16
1.5.2 Age groups considered	18
1.5.3 Geographical coverage	18
1.5.4 Time frame	19
1.5.5 Protective actions	20
1.6 Procedures	22
2. Methodology	24
2.1 Approaches	24
2.2 Input data	24
2.2.1 Radionuclide composition and deposition	24
2.2.2 Environmental monitoring data	26
2.2.3 Food monitoring and consumption data	26
2.3 External radiation doses from radionuclides deposited on the ground (groundshine)	27
2.3.1 Inside Japan	27
2.3.2 Outside Japan	28
2.4 External radiation doses from the radioactive cloud (cloudshine)	28
2.4.1 Inside Japan	28
2.4.2 Outside Japan	29
2.5 Internal radiation doses from inhalation	30
2.5.1 Inside Japan	30
2.5.2 Outside Japan	30
2.6 Internal radiation doses from ingestion of food	31
2.6.1 Ingestion doses inside Japan	31
2.6.2 Monitoring of Japanese food outside Japan	35
2.6.3 Ingestion doses outside Japan	36
2.7 Internal doses from ingestion of tap water	37
2.8 Doses due to the releases of radionuclides to the sea	37
2.9 Summary of key assumptions	37

3. Results	40
3.1 Presentation of results	40
3.2 Age dependence of dose estimates	40
3.3 Geographical distribution of doses	41
3.3.1 Estimated effective doses	41
3.3.2 Estimated thyroid doses	42
3.3.3 Doses to the southern hemisphere	42
3.4 Results for food ingestion doses in Japan	43
3.5 Results for tap water	43
4. Discussion	48
4.1 Temporal distribution of the dose	48
4.2 Influence of protective actions on the dose	48
4.3 Contribution of the different exposure pathways	51
4.4 Comparison to doses from other radiation sources	51
4.5 Comparison of different methodologies	54
4.6 Comparison with in vivo human measurements	55
4.6.1 Monitoring in Japan	56
4.6.2 Monitoring outside Japan	57
4.7 Main sources of uncertainty and limitations	60
4.7.1 Estimating time-integrated air concentrations based on deposition measurements	60
4.7.2 Assumed radionuclide composition in Japanese locations	61
4.7.3 Location factor	61
4.7.4 Use of ICRP dose coefficients for Japan	61
4.7.5 Source term	61
4.7.6 Dispersion modelling	62
4.7.7 Ingestion doses in Japan	62
5. Summary and conclusions	63
References	67
Glossary	71
Abbreviations	77
Annex 1. Declaration of interests statement	78
Annex 2. Examples of doses from different sources of exposure	79
Annex 3. Input parameters for the dose assessment	80
1. Inhalation dose coefficients	80
2. Ingestion dose coefficients	82
3. Inhalation rates	83
4. External dose per unit deposit	84
5. Dose reduction factor: external dose from radioactive material in air	86
Annex 4. Source term for use in dispersion-based calculations	87
Annex 5. Example of input monitoring data from Japan	90

Annex 6. Models for external and inhalation doses in Japan (Approach A and Approach B)	95
1. Model for external dose from nuclides deposited on soil	95
1.1 Effective dose	95
1.2 Thyroid dose	96
2. Model for external dose from radioactive cloud	96
2.1 Effective dose	96
2.2 Thyroid dose	97
3. Model for internal dose from inhalation	97
3.1 Effective dose	97
4. Input data	98
4.1 Surface activity density of ^{137}Cs (A_{Cs137})	98
4.2 Surface activity density of other nuclides (A_m)	98
References to Annex 6	99
Annex 7. Models for external and inhalation doses outside Japan (Approach C).	101
1. Model for external dose estimation for radionuclides deposited on the ground	101
2. Model for external dose estimation for radionuclides in the radioactive cloud	101
3. Model for internal dose from inhalation	102
References to Annex 7	102
Annex 8. Model for ingestion doses in Japan (Approach D)	103
1. Model for dose calculation	103
2. Input data	104
3. Assumptions	116
Annex 9. Model for ingestion doses outside Japan (Approach E)	117
1. Model for dose estimation	117
2. Input data	117
3. Assumptions	120
References to Annex 9	120
