BACTERIOLOGY

2nd edition

World Health Organization
Geneva

The World Health Organization was established in 1948 as a specialized agency of the United Nations serving as the directing and coordinating authority for international health matters and public health. One of WHO's constitutional functions is to provide objective and reliable information and advice in the field of human health, a responsibility that it fulfils in part through its extensive programme of publications.

The Organization seeks through its publications to support national health strategies and address the most pressing public health concerns of populations around the world. To respond to the needs of Member States at all levels of development, WHO publishes practical manuals, handbooks and training material for specific categories of health workers; internationally applicable guidelines and standards; reviews and analyses of health policies, programmes and research; and state-of-the-art consensus reports that offer technical advice and recommendations for decision-makers. These books are closely tied to the Organization's priority activities, encompassing disease prevention and control, the development of equitable health systems based on primary health care, and health promotion for individuals and communities. Progress towards better health for all also demands the global dissemination and exchange of information that draws on the knowledge and experience of all WHO's Member countries and the collaboration of world leaders in public health and the biomedical sciences.

To ensure the widest possible availability of authoritative information and guidance on health matters, WHO secures the broad international distribution of its publications and encourages their translation and adaptation. By helping to promote and protect health and prevent and control disease throughout the world, WHO's books contribute to achieving the Organization's principal objective—the attainment by all people of the highest possible level of health.

Basic laboratory procedures in clinical bacteriology

Basic laboratory procedures in clinical bacteriology

Second edition

J. Vandepitte and J. Verhaegen

Contents

Preface	viii
Introduction	1
Quality assurance in bacteriology	2
Introduction	2
Definitions	2
Internal quality control	6
External quality assessment	16
 PART I	
Bacteriological investigations	19
Blood	20
Introduction	20
When and where bacteraemia may occur	20
Blood collection	20
Blood-culture media	22
Processing of blood cultures	23
Cerebrospinal fluid	25
Introduction	25
Collection and transportation of specimens	25
Macroscopic inspection	26
Microscopic examination	26
Preliminary identification	28
Susceptibility testing	29
Urine	30
Introduction	30
Specimen collection	30
Culture and interpretation	32
Interpretation of quantitative urine culture results	34
Identification	35
Susceptibility tests	36
Stool	37
Introduction	37
Etiological agents and clinical features	37
Appropriate use of laboratory resources	39
Collection and transport of stool specimens	40
Visual examination of stool specimens	41
Enrichment and inoculation of stool specimens	41
Media for enteric pathogens	42
Primary isolation	42
Preliminary identification of isolates	44

Final microbiological identification	50
Serological identification	54
Upper respiratory tract infections	60
Introduction	60
Normal flora of the pharynx	60
Bacterial agents of pharyngitis	61
Collection and dispatch of specimens	62
Direct microscopy	62
Culture and identification	63
Susceptibility testing	65
Lower respiratory tract infections	66
Introduction	66
The most common infections	66
Collection of sputum specimens	68
Processing of sputum in the laboratory (for non-tuberculous infections)	68
Culture for <i>Mycobacterium tuberculosis</i>	72
Interpretation of cultures for <i>M. tuberculosis</i>	74
General note on safety	74
Sexually transmitted diseases	76
Introduction	76
Urethritis in men	77
Genital specimens from women	79
Specimens from genital ulcers	82
Purulent exudates, wounds and abscesses	86
Introduction	86
Commonly encountered clinical conditions and the most frequent etiological agents	86
Collection and transportation of specimens	89
Macroscopic evaluation	90
Microscopic examination	91
Culture	92
Identification	93
Susceptibility testing	97
