GUIDELINES FOR DRINKING-WATER QUALITY

Vol. 3. Drinking-water quality control in small-community supplies

WORLD HEALTH ORGANIZATION

The World Health Organization is a specialized agency of the United Nations with primary responsibility for international health matters and public health. Through this organization, which was created in 1948, the health professions of some 165 countries exchange their knowledge and experience with the aim of making possible the attainment by all citizens of the world by the year 2000 of a level of health that will permit them to lead a socially and economically productive life.

By means of direct technical cooperation with its Member States, and by stimulating such cooperation among them, WHO promotes the development of comprehensive health services, the prevention and control of diseases, the improvement of environmental conditions, the development of health manpower, the coordination and development of biomedical and health services research, and the planning and implementation of health programmes.

These broad fields of endeavour encompass a wide variety of activities, such as developing systems of primary health care that reach the whole population of Member countries; promoting the health of mothers and children; combating malnutrition; controlling malaria and other communicable diseases including tuberculosis and leprosy; having achieved the eradication of smallpox, promoting mass immunization against a number of other preventable diseases; improving mental health; providing safe water supplies; and training health personnel of all categories.

Progress towards better health throughout the world also demands international cooperation in such matters as establishing international standards for biological substances, pesticides and pharmaceuticals; formulating environmental health criteria; recommending international nonproprietary names for drugs; administering the International Health Regulations; revising the International Classification of Diseases, Injuries, and Causes of Death; and collecting and disseminating health statistical information.

Further information on many aspects of WHO's work is presented in the Organization's publications.

CONTENTS

	Page
List of tables	v vii
1. Water quality	1
1.1 Application of guideline values	1
1.2 Microbiological aspects.	2
1.3 Biological aspects	3
1.3.1 Protozoa	· . 3
1.3.2 Helminths	3
1.4 Chemical and physical aspects	4
1.4.1 Turbidity	4
1.4.2 Colour	5
1.4.3 Taste and odour	5
2. Planning for water quality surveillance and control	6
2.1 Organizational framework	
2.2 Assessment of existing situation	. 9
2.3 Sanitary inspections and water sampling	. 11
2.4 Handling and use of information.	
2.4.1 Results of water analysis	11
2.4.2 Results of sanitary inspections	
2.4.3 Comprehensive information processing	15
3. Sanitary inspections	16
3.1 Organization	16
3.2 Methodology	18
4. Collection of water samples	
4.1 Basic requirements	19
4.2 Sampling point selection	19
4.3 Equipment	22
4.3.1 Sterilization procedure for sample bottles	22
4.3.2 Packing of sample bottles for transportation	23
4.4 Dispatch of samples	23
